

MediPro to Extend Lytec and Medisoft Upgrade in Cloud--based Medical Billing

MediPro--the reputed medical billing software company into practice management systems

Kennesaw, Georgia Jun 29, 2023 ([Issuewire.com](https://www.issuewire.com)) - MediPro--the reputed medical billing software company into practice management systems has said it will create new milestones in its mission of integrating technology into the healthcare community with many innovative products.

According to the MD, as part of its 20th anniversary of inception, MediPro will unlock new products that will push the boundaries of medical software, innovating on the cloud- and server-based products and services.

The MD noted that the objective of any excellent medical billing software has been to help healthcare providers to devote more attention to patient care than wasting time on bill making. The complete cycle of the hospital visit covering tasks like scheduling an appointment until payment will be an automatic process capturing the entire workflow methodically.

With healthcare becoming more mobile-oriented and information flow needs to be seamless between facilities, cloud-based solutions have become the in-demand solutions, unlike on-premise services. Cloud-based solutions deliver most of the desired functions in the billing software without any hassles.

In line with the focus on better customer focus and cost cushion, the [Lytec upgrade](#) will incorporate many new features. They include easy inclusion of saved notes and enable the following functions.

Tracking of pending transactions from completed appointments; data elimination of inactive patients, adding of saved notes to payments. Fresh updates with real-time coverage of co-insurance and current co-pay will be another feature.

The enhancement of billing software via lytec upgradation will enrich the user experience. The same level of value addition will be given in the [Medisoft upgrade](#) as well within the existing cloud solutions. The objective is to optimize the customer experience of healthcare professionals throughout the sales process, project management, and phases of technical support.

The MD of MediPro explained that the mission is to close the vacuum in customer-centric services in the healthcare sector by innovating on the company's comprehensive suite of interactive and cost-effective applications as an industry leader.

In terms of comparison, both Medisoft and Lytec are top-notch management systems for medical practices and billing. They have been adopted by thousands of providers for billing and practice management. On the usage front, Lytec is considered the easiest medical billing software and that is why it is prominent with most medical billing schools as a training software. Medisoft uses simple icons and its use does not need any hard training.

As for upgraded versions, Medisoft v23 has many exciting features such as insurance card scanning. The auto-Assign Statement Notes eliminate the risk of Duplicate Patient Records.

The Timely Filing Calculator makes it easy to flag problem areas with color coding. Medisoft 23 is available in both Cloud and Premise versions.

The MD also hinted that some AI-based solutions are also underway in the Lytec upgrade and Medisoft upgrades in the cloud segment of medical bill software.
