

SLFI @BRC20-based bitcoin ordinals is another big pump in the Crypto market

SELFIE BRC-20 TOKEN

Dubai, United Arab Emirates Jun 9, 2023 ([Issuewire.com](https://www.issuewire.com)) - AI-Enabled blockchain deployment and secure your cryptocurrency with a decentralized SELFIE wallet. The AI-enabled face recognition system provides advanced protection for your digital assets on the blockchain.

SELFIE is the first blockchain wallet with face recognition for secure AI-enabled transactions and payments that supports a multi-chain network platform.

SELFIE is launched its [\\$SLFI BRC-20](#) token through ordinals protocol in the blockchain to deploy an AI-enabled digital wallet. The BRC20 token powers SELFIE's face-recognized blockchain wallet for a highly secure and safe custodial wallet.

Our mission is to build AI-enabled digital facial identity systems that fundamentally change how the world views, approaches, manages, and processes identity-based transactions through- verified claims.

SELFIE is building a robust and scalable AI-enabled blockchain network that aims to secure transactions for users globally. They aim to provide a seamless and secure experience through facial recognition authentication for digital assets across multiple blockchains. Their BRC20 token will power this network, enabling higher throughput and lower fees compared to traditional solutions.

SELFIE's technology integrates computer vision and deep learning to create a digital identity verification system that is highly accurate and customizable. The facial recognition authentication system can be tailored for different use cases and industries that require secure identity management. By building this on a blockchain network, SELFIE aims to make identity verification more tamper-proof, private, and portable for users.

Moving forward, SELFIE plans to launch APIs and SDKs for developers to integrate their facial recognition authentication into third-party applications. They will expand token utility by enabling more use cases that require verifiable identity on the blockchain. Overall, SELFIE's goal is to set a new standard for identity security through the combination of AI, biometrics, and blockchain technology.

You know how it goes in the crypto world - one day a new token pops up out of nowhere and starts pumping like crazy. The latest one making waves is SLFI, a BRC20-based Bitcoin token. If you're into crypto, chances are SLFI has already caught your eye. The FOMO is real.

Like any good crypto pump, SLFI came out of the left field. Nobody had heard of it a week ago. Now it's all anyone in crypto Telegram groups and Reddit forums can talk about. The hype machine is in overdrive. But is SLFI just another meme coin, or does it have real potential? As with any new crypto, do your research. But if you're looking to ride the wave of the latest crypto pump, SLFI might just be your ticket to big gains.

The pump is on - are you in?
