

Creative Biolabs Launches Innovative Probiotic Strain Products, Expediting Probiotic Research

Creative Biolabs, a leading biotech company specializing in biotechnology services and products, is excited to announce the launch of its innovative probiotic strain products aimed at accelerating probiotic research.

New York City, New York Jul 25, 2023 ([Issuewire.com](https://www.issuewire.com)) - In recent years, probiotics have received a lot of interest due to their promising benefits in improving human health. Extensive studies have shown that probiotics can enhance various health outcomes, ranging from gut health and digestion to immune function and mental wellness. The introduction of next-generation probiotics has propelled probiotic research into a new phase. However, a critical challenge in this field has been the limited availability of well-characterized probiotic strains for in-depth research. To address this issue, Creative Biolabs has developed a comprehensive series of [probiotic strain](#) products, each targeting a specific strain, providing researchers with a diverse range of options to enhance their studies.

Creative Biolabs' cutting-edge probiotic strain products include a variety of strains, such as *Akkermansia*, *Escherichia*, and [Lactobacillus](#). These products offer scientists and researchers valuable tools to deepen their understanding of gut microbiota and develop novel therapeutics.

[Akkermansia](#), considered a promising candidate among the next-generation beneficial microbes, shows potential as a therapeutic target in microbiota-related diseases, including colitis, metabolic syndrome, immune diseases, and cancer. Creative Biolabs offers a wide selection of diverse and high-quality *Akkermansia* strains to support studies in this area. Furthermore, [Escherichia](#) is the active component of the microbial drug Mutaflor, used in the treatment of various gastrointestinal disorders, including diarrhea, uncomplicated diverticular disease, and IBD, particularly UC. The *Lactobacillus* range includes strains that have demonstrated various therapeutic benefits, such as antimicrobial properties and modulation of the immune system. Above strain products are all available at Creative Biolabs.

"With the growing interest in probiotics and their potential therapeutic applications, having well-defined probiotic strains available for research is critical," states a specialist at Creative Biolabs. "Our new line of probiotic strain products provides scientists and researchers with reliable tools to expedite their studies into the intricate relationships between gut microbiota and human health."

Creative Biolabs' probiotic strains are meticulously selected, extensively characterized, and rigorously tested to ensure consistency and reliability. In addition, the company offers customization options to meet specific research requirements, enabling researchers to access strains tailored to their unique needs.

About Creative Biolabs

Creative Biolabs, a US-based biotech company, has been at the forefront of probiotic strain development for decades, serving hundreds of customers with its comprehensive solutions and well-developed probiotic strain products, making research more accessible for global customers. The company will continue to strengthen its research team by utilizing all available resources to produce more dependable and cutting-edge products for the future generation of probiotic research, actively

advancing scientific study in this field.
