

Introducing the All-New AudiFab: Redesigned Interface for Enhanced User Experience

AudiFab unveils its new interface for its music converter software to offer users a smoother and more professional experience.

Canoga Park, California Jul 19, 2023 ([Issuewire.com](https://www.issuewire.com)) - Until July 10, 2023, AudiFab Inc. officially launched the new interface version for all its music converter software, such as Spotify Music Converter, Apple Music Music Converter, and Amazon Music Converter. AudiFab is designed for providing users with fast and high-quality audio recording, editing, and exporting services with its user-friendly operation interface. With AudiFab's new interface version, you could easily access all the functions and options at a glance, and enjoy a more intuitive and efficient music conversion process.

Introducing the Enhanced Interface of AudiFab Music Converters:

App or Web Player - Two Ways to Record Music: Unlike its predecessors, the latest interface version offers users the freedom to select between two distinct platforms: App and Web Player, catering to individual preferences and convenience. If you choose to download from App, AudiFab products will seamlessly integrate with your preferred music app, enabling effortless conversion of music files. While downloaded from Webplayer, a remarkable innovation, allows you to convert music without installing a music app on your device. Users in this mode can simply connect to their desired web player and initiate the conversion process directly from the AudiFab software interface.

New Interface Button Position Changes:

- **Register:** The new version of the Register button is in the bottom left corner.
- **Online Help:** In the old version, the “Help” button was located at the bottom left. In the new version, it has been moved to the Menu at the top right corner.
- **Converted history:** You can easily access your conversion history from two places. From the Converted section on the left side, you can see all the songs you have converted. On the bottom of the Home interface, you can see the latest ones. To go to the converted screen, just click “View All”.

Customize Your Settings: The settings interface lets users customize different settings to suit their needs. It has three parts: Converter Setting, Output Setting, and General Setting. Converter Setting allows users to optimize the music conversion process by selecting the Conversion Mode, Output Format, Bit Rate, and actions after conversion. Output Setting enables users to customize the Output folder, File name, and organization. General Setting offers users various options to personalize the software, such as Appearance (Default as Dark Skin in the new version) and Language.

Explore Free Toolbox: AudiFab offers versatile tools to meet users diverse needs.

- **Format Converter:** This tool lets users convert their local audio files to popular formats like MP3, M4A, FLAC, WAV, OGG, and AIFF. Users can easily adapt their audio files to the format that matches their preferences and devices.
- **Burn CD:** This feature allows users to create their own music CDs with their favorite tracks and albums for offline listening or sharing. For the first time, AudiFab Amazon Music adds this feature that allows users to create their own music CDs with their favorite tracks and albums.

Note: The Burn CD functionality is not available on Mac version.

- **Edit Tag:** The Edit Tag tool enables users to customize and personalize the information associated with their music files. From modifying track names and artist details to adding album artwork and genre tags, AudiFab ensures that users have complete control over their music metadata.

(4) 1-click Upload to iTunes/Music

For Spotify and Amazon Music Converter users, AudiFab goes a step further by offering the convenience of a one-click upload to iTunes/Music functionality, creating a seamless and unified music library experience.

We believe that you will enjoy a smoother and more efficient music conversion with the new interface version of the AudiFab products. Plus, the new version of AudiFab has a one-minute free trial limit.
