

Nearly 100,000 Pedestrians Are Hit By Vehicles Annually According to LookupAPlate's Latest Report

In the U.S., pedestrian deaths hit a 41-year high in 2022, with 7,508 people killed by vehicles, the highest number since 1981.

Los Angeles, California Jul 26, 2023 ([IssueWire.com](https://www.issuewire.com)) - LookupAPlate, a free nationwide license plate lookup service and community platform to report unsafe driving and bad drivers, reports that 95,000 pedestrians are hit by vehicles each year. [This study](#) not only analyzes those being hit but also references the increasing rate of fatalities, as well.

The study was conducted to show how unsafe driving practices have impacted the number of injuries and fatalities. Smartphone usage in a vehicle is referenced as the number one culprit when correlating the increase of both. Just between 2010 and 2022, pedestrian deaths increased by an astonishing 77%.

In order to combat these rising statistics, LookUpAPlate is looking to promote safer driving through its services and by providing fact-checked studies that spread awareness. The organization is centered around making driving a safer activity for Americans. They provide a free nationwide license plate lookup service that allows users to provide information regarding unsafe driving. The website was designed to deter unsafe driving practices by calling out the unsafe driver on their platform publicly.

Co-founder Jason L. Arthur created the platform to encourage Americans to be better drivers. “Ultimately, with this platform, we’re trying to bring some accountability among the offending drivers and, in a small way, contribute to making American roads safer,” says Arthur. He designed LookupAPlate along with his partner Ritesh because he saw the need for a public forum to report unsafe driving.
