Durham, North Carolina Jul 18, 2023 (Issuewire.com) - A-D's Metal Roofing Company, a leading provider of roofing services in North Carolina, successfully enhanced its inventory management software with BarCloud's barcode inventory system. The company's commitment to exceptional service and the need for efficient inventory management led them to seek a solution that would provide real-time visibility, streamline operations, ensure cost-effective practices, and facilitate expanding operations.

Prior to implementing the inventory management software, the roofing company faced numerous obstacles. They lacked visibility on inventory levels, leading to the loss of valuable construction supplies and equipment. Staying within budget became increasingly difficult due to overordering ultimately resulting from inadequate visibility. The absence of consolidated data on customers, equipment, and supplies hindered their ability to effectively manage operations.

The benefits of the inventory control software were immediately evident, including:

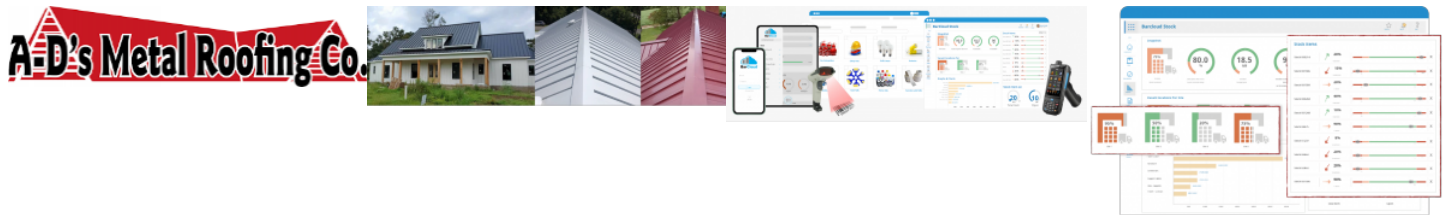

- Enhanced customer satisfaction
- Reduced operation costs
- Visibility over inventory levels and movements
- User-friendly and intuitive inventory tracking features

With their software A-D's Metal Roofing was able to eliminate concerns about inventory and equipment loss, significantly cutting down costs by reducing overordering. The cloud-based inventory system gave the company access to real-time inventory data and updates, even when contractors were working onsite. This helped ensure that they could maintain precise control over their operations at all times, further solidifying their position as a leader in the North Carolina construction industry. The company's employees were able to adapt quickly to the user-friendly software, seamlessly incorporating it into their daily tasks.

With the successful implementation of the inventory tracking solution, the roofing company is now poised for future growth and expansion. They envision enlarging their warehouse and entering the retail market with ease, aided by the scalable nature of the inventory software for effortless tracking of equipment and construction supplies.

[BarCloud](#) is a market leader in Inventory System and Asset Tracking Solutions that uses [Barcode technology](#) with mobile Barcode, smartphones, and tablets. They help improve profitability by eliminating manual data entry, paper files, and forms and by automating record keeping. With their powerful system, businesses have 24/7 access to the location and status of their Inventory and Assets, whether they are in the warehouse, on the field, or in the office. They have offices in California (headquarters), and Chicago.
