

FreightOScope Announces Release of Digital Forwarding Software Platform for The Global Logistics Industry

PRESS RELEASE

FreightOScope Announces Release of Digital Forwarding Software for The Global Logistics Industry

FREIGHTOSCOPE
All-In-One Platform | Built for Simplicity

www.freightoscope.com

Coral Springs, Florida Sep 14, 2023 (Issuewire.com) - FreightOScope, a robust mid-market digital forwarding software platform, recently announced the release of its software solution. This all-in-one platform enables independent freight forwarders to manage their forwarding business more efficiently. The cloud-based and fully integrated platform is modern, secure, easy to use, and affordable.

“I have been actively searching for the perfect rate management program for the past 12-15 years and have used some industry-leading programs. FreightOScope is FRESH and has a much better interface with users. Other programs have trouble converting a search rate to a written quote, NOT FreightOScope. Our team of 38 export staff has been using this program since the beginning of the year, and we are all very pleased. The Staff behind FreightOScope is outstanding and lightning fast addressing any issue we bring up,” said Peter Porse, Executive Vice President of Clearfreight, Inc. “Unlike their competition, they listen to our concerns. My very best recommendation for FreightOScope and team.”

FreightOScope offers four vital products for the freight forwarding industry. The [Rate Management System](#) helps manage and organize FCL, LCL & AIR rates and contracts, access carrier Spot rates, and send quotes to customers quickly. The [Tracking System](#) enables tracing any AWB or container for all export or import shipments. The [Electronic AWB System](#) complies with ICS2 requirements and electronically transmits AWB and manifest details with 160+ airlines worldwide. The [Freight Management System](#) is a complete solution to manage sales, pricing, operations, documentation, billing, comprehensive reporting, and analytics to keep freight forwarders ahead in the digital forwarding industry.

“We’re excited to offer freight forwarders a modern software solution to enhance their business operations,” commented FreightOScope Managing Director Sripad Bharati. “FreightOScope consists of four modules that offer the digital tools necessary to comply with industry standards and increase efficiency and profitability.”

As businesses grow, they need a robust digital forwarding system like FreightOScope. FreightOScope helps companies by turning confusion into understanding and provides benefits and features for companies that are growing while being simple to use and easy to execute. You will be more equipped to make better-informed decisions with real-time insights.

If your business needs help with your current Rate Management Software, Tracking System, Electronic-AWB System, or a complete digital forwarding solution, consider FreightOScope.
