New York City, New York Sep 15, 2023 ([IssueWire.com](https://www.issuewire.com)) - Web developers and digital enthusiasts now have an opportunity to learn about developing digital experience platforms thoroughly in this book by Sourabh Sethi. The researcher, tech expert, and analyst has collaborated with Shailesh Kumar Shivakumar for 'Building Digital Experience Platforms: A Guide to Developing Next-Generation Enterprise Applications'. Both digital experts have taken this initiative to make people aware of the technicalities and best practices of digital experience platforms or DXPs that improve development productivity and release timelines.

Building a platform is essential for enterprises, web developers, and project managers where DXPs play a crucial role. 'Building Digital Experience Platforms' carries rich insights along with a thorough examination of different DXP features that will help strategize and build every layer of a digital platform. Sourabh Sethi is a researcher and developer who worked on blockchains, distributed systems, content-based search retrievals, and DXPs. While engaging in several large-scale and complex projects, Sourabh realized that DXPs are the next big step in digital evolution, even in transforming the banking domain, and has come up with a layered approach to handle scalable transactions in the banking platform. The content of the book is divided into five parts in total where the readers will get to learn about security, integration, and best practices along with digital trends like Blockchain, IoT, containers, chatbots, artificial intelligence, etc. Get the book at https://www.amazon.com/Building-Digital-Experience-Platforms-Next-Generation-ebook/dp/B07NC2SDHF?ref_=ast_author_dp to know more.
