

Akrivisbio Inc. announces the introduction of a new line of metabolic assay kits

Fremont, California Dec 3, 2023 ([Issuewire.com](https://www.issuewire.com)) - AkrivisBio provides tools to the life science/biotechnology industry. We offer a variety of research products including biochemicals and highly sensitive assays for a broad range of biochemicals, ions and enzymes and other popular targets sought by researchers. With the new line of assays including assays for metabolic intermediates, as well as cell proliferation and toxicity assays, users can quantify more than 200 of the most common metabolic intermediates, enzymes, cofactors and ions with increased precision, greater ease, and lower cost.

“One of our founding principles at AkrivisBio is to provide robust metabolic assays, which provides increased precision with a minimum amount of user effort as economically as possible,” said Nick Chacos, CEO of AkrivisBio. “Organizations are increasingly looking for reliable, reproducible, ready-to-use assays rather than developing them in-house so they can spend their time on the more important aspects of their research. “

Our mission is to provide a variety of chemical, biochemical and enzyme activity assays to meet the evolving needs of the scientific community and enable faster and more accurate experimentation. Our comprehensive portfolio of assays can support a wide range of applications, including molecular biology, genomics, proteomics, cell biology, and beyond. Our mission is to offer easier to use, highly sensitive, precise, more reproducible, and less expensive assays than those offered by others.

Based in the beautiful Bay area of Northern California, AkrivisBio is focused on improving the user experience with enzyme-based metabolic assays. Learn more at www.akrivisbio.com
