

Clarks Road Facility in Craven County Elevates Security with LINEV Systems' CLEARPASS Full-Body Scanner

LINEV SYSTEMS

New Bern, North Carolina Feb 16, 2024 ([Issuewire.com](https://www.issuewire.com)) - The Craven County Detention Center takes a significant step forward in enhancing security and safety for both inmates and staff by implementing [LINEV Systems' CLEARPASS full-body scanner](#). This cutting-edge technology represents the county's commitment to combat the introduction of illicit items, including narcotics and weapons, into their detention facility, addressing a critical challenge faced by correctional institutions nationally.

CLEARPASS, a premium performance [full-body screening solution](#), produces the best images, utilizes an extremely low X-ray dose rate, and both acquires and displays an image in under 3-seconds. This system also features [DruGuard®](#), an AI-powered algorithm which identifies potential narcotics secreted internally. The full-body AI detection software categorizes and color-codes objects into four groups: Electronics (Blue), Clothing or Accessories (Green), Foreign Objects (Orange), and Threats/Weapons (Red). Finally, [CLEARPASS](#) is the only ADA compliant full body scanner available on the market.

Highlighting the necessity of this technology, Major David McFadden of Craven County referred to the recent incident involving the death of an inmate due to fentanyl and alcohol toxicity. He emphasized the challenge in detecting drugs or weapons concealed within the body, a problem that [CLEARPASS](#) aims to solve. Its implementation at the Clarks Road facility is a testament to the institution's ongoing commitment to safety and security. Full-body scanners are crucial in detecting hidden contraband, including substances ingested into the body or concealed within body cavities.
