

Insightto.ai Now Supports Integration with Zapier

Newark, New Jersey Feb 27, 2024 ([IssueWire.com](https://www.issuewire.com)) - Insightto.ai, the revolutionary AI-powered chatbot builder, proudly unveils its latest enhancement: integration with Zapier. Zapier is a leading automation platform that allows users to consolidate their favorite apps, from CRM systems like HubSpot to messaging platforms like Slack and WhatsApp. This integration empowers businesses to create customized, automated workflows tailored to their unique needs.

Zapier offers seamless integration with over 6,000 apps, allowing users to create workflows and

optimize nearly every aspect of their business. Each workflow comprises two fundamental components: a trigger, initiating the sequence, and one or more actions, which occur across different applications in response to the trigger.

For example, consider a scenario where a user desires to promptly notify the sales department upon a lead completing a SurveyMonkey form on their website. With Insighto.ai's Zapier integration, this process becomes straightforward:

- **Trigger:** When a user submits a SurveyMonkey form on your website
- **Action:** The sales department is notified in a dedicated Slack channel
- **Additional Actions:** Optionally, create a new CRM contact or execute other tailored operations to enhance workflow efficiency.

With Zapier's extensive app library and Insighto.ai's intuitive platform, businesses can become highly efficient and save tons of time.

About Insighto.ai

Insighto.ai is a groundbreaking AI-powered chatbot builder that lets you build conversational AI chatbots within minutes. Here are some notable features:

- **Data-driven training:** Train it on your data (PDFs, weblinks) for unmatched context and accuracy.
- **Auto-intent capture:** Categorize queries by lead, search, career & support for efficient routing.
- **Multilingual support:** Serve customers in their native language with seamless translations.
- **Multimodal support:** Enter prompts in a mix of text, voice, and images for an intuitive user experience.
- **Customizable voice & personality:** Make your chatbot unique and reflect your brand identity.
