

From China to Africa: INSONSHADE's Anti-Insect Nets Protect High-Value Crops

Innovative nets help African farmers combat climate change-related pest threats

Taizhou City, Zhejiang Apr 26, 2024 ([Issuewire.com](https://www.issuewire.com)) - In recent years, African agriculture has faced several challenges, including rising temperatures, unpredictable rainfall, and pest invasions. Invasive insects like fall armyworms and larger grain borers, along with native desert locusts, have caused significant damage. To address these issues, INSONSHADE's HDPE anti-insect nets offer an effective and eco-friendly solution.

"Agricultural pests are a concern everywhere. Africa is dealing with problems we previously faced in China, like locust swarms," said John, the founder of INSONSHADE. "This is why we focus on developing and producing agricultural protective nets, and why we're now promoting our new anti-insect net models to the African market."

[INSONSHADE's anti-insect nets](#) are made from 100% virgin HDPE with UV stabilizers, providing durability and UV resistance. They can last over six years, depending on local conditions. The nets' resilience and insect resistance are so reliable that they are even used in China as convenient

enclosures for raising edible locusts.

To meet African farmers' needs, INSONSHADE offers customizable mesh sizes, ranging from 20 to 60, to protect different high-value crops from various insects. These nets effectively block locusts, whiteflies, leaf miners, aphids, and fruit flies. By using these nets, farmers can reduce their reliance on chemical pesticides, lowering health risks for themselves and minimizing environmental impact.

INSONSHADE has partnered with wholesalers and distributors in more than five African countries to ensure a steady supply of anti-insect nets. Farmers primarily use these nets to protect their high-value crops and cover ventilation openings in modern greenhouses.

About INSONSHADE

INSONSHADE is a leading Chinese agricultural textile manufacturer specializing in high-quality greenhouse climate curtains, shade cloth, and fruit tree nets. Established in 1990, the company has extensive production and R&D experience, supports OEM/ODM production, and adheres to international standards.
