

PlanetBids Celebrates World Earth Day

The sustainably-focused eProcurement solutions provider helps agencies lower their environmental impact

What it Means to be Green

"The purpose of the PlanetBids eProcurement system is to promote sustainability and standardize across the nation with some of the biggest users in paper and in transportation," says PlanetBids CEO David DiGiacomo. "We're able to make a huge impact through this little piece of technology."

In the last 12 months...

PlanetBids client agencies saved approximately:

2K+

Trees

=

700,000

Bid Notifications

142

Trees

=

40,600

Bid Responses

61K

commute hours on
bid meetings

When agencies and companies make sustainable choices a priority, they can experience more cost savings while also doing the right thing for the planet.

Studio City, California Apr 22, 2024 ([IssueWire.com](https://www.issuewire.com)) - PlanetBids is proud to celebrate World Earth Day on April 22, 2024. The California-based e-Procurement software provider is focused on removing the tedious day-to-day manual tasks associated with paper solicitations and the manual bid submission processes that still plague procurement teams of all sizes.

This application also allows agencies to measure and track sustainable procurement goals set by the user while being proactive in prequalifying sustainable, local and MWBE vendors. By simply moving these operations online, we are reducing paper waste and carbon emissions, and allowing users to make conscious decisions about who they buy from, all while saving agencies hours of time and millions of dollars.

The PB System™ from PlanetBids has SaaS-based modules for frictionless Bid Management, Vendor Management, Document Management, and more, saving more than 2200 trees each year – that's approximately 22.4 million sheets of paper!

"We work for a company that is very green, and the purpose of our system is to promote sustainability and standardize across the nation with some of the biggest users in paper and transportation. We're able to make a huge impact through this little piece of technology," said PlanetBids CEO David DiGiacomo.

PlanetBids also estimates that its agencies save an estimated 61,000 commute hours each year by moving bid meetings and solicitation hearings online versus in person.
