

Dr. Johnny Duncan: Leading Neurosurgeon Specializing in Minimally Invasive and Innovative Interventional Techniques

Providing Patient-Centered Care and Minimally Invasive Surgery in Lawton, Oklahoma

New York City, New York May 14, 2024 ([IssueWire.com](https://www.issuewire.com)) - A distinguished neurosurgeon with over two decades of experience, Dr. Duncan is revolutionizing pain management through his commitment to non-opioid solutions and minimally invasive surgical techniques. Serving as a beacon of hope for patients suffering from spinal disorders and nerve damage, he practices at Comanche County Memorial Hospital (CCMH) in Lawton, Oklahoma, where he prioritizes holistic approaches to alleviate pain and enhance the overall well-being of individuals.

He strongly believes in exploring non-surgical avenues before opting for invasive procedures, so he conducts thorough neurologic examinations to pinpoint the root cause of his patient's pain. Through detailed explanations of radiology findings and the use of anatomical models, he ensures that patients are actively involved in understanding their condition and treatment options. This patient-centered approach allows for collaborative decision-making, where he and his patients work together to determine the most effective and personalized treatment plan.

Academically, Dr. Duncan's educational background includes a neurosurgery residency at Oklahoma State University Center for Health Sciences, a Complex Spine Fellowship at the University of Arizona College of Medicine with Academic Distinction – Tucson, and a Doctor of Osteopathic Medicine degree from Oklahoma State University Center for Health Sciences. He attributes a significant portion of his success to the exceptional mentorship of Allan J. Hamilton, MD, Chief of Neurosurgery, during his time at the University of Arizona. Dr. Duncan's expertise spans a wide array of spinal disorders, including chronic nerve pain secondary to back and neck injuries, sciatica, spinal canal stenosis, herniated and bulging discs, failed back surgery, degenerative disc disease, fractures, trauma, diabetic neuropathy, post-shingles neuralgia, occipital neuralgia, and chronic nerve damage after an orthopedic joint replacement, such as the knee, hip, shoulder, foot, and ankle.

Recognized as a Fellow of the American College of Osteopathic Surgeons (FACOS), the doctor is board-certified in neurosurgery by the American Osteopathic Board of Surgery (AOBS). The broad aim of the ABOS is to encourage the study, commit to ongoing evidence-based education resulting in high-quality whole-person care, improve the practice, elevate the standards, and advance the science of neurological surgery and thereby serve the cause of public health.

An authority in his field, Dr. Duncan's unwavering commitment to improving the quality of life for his patients has earned him recognition as the Best Neurosurgeon in Oklahoma by the 2024 Best in Oklahoma Magazine.

On a more personal note, his success can be attributed to his compassionate listening, patient-centered approach, and dedication to providing exemplary care to those in need.
