

Elevating Audio Excellence: Introducing the Enhanced KLOVER MiK Parabolic Microphone Series

Enhanced KLOVER MiK Parabolic Microphone Series Revolutionizing Audio Capture for Broadcasters and Beyond

Janesville, Wisconsin May 13, 2024 ([IssueWire.com](https://www.issuewire.com)) - Klover Products is thrilled to announce the release of the updated KLOVER MiK Parabolic Microphone series. This sets a new standard for audio quality for security agencies, sports broadcasters, and audio enthusiasts.

After extensive research and development, Klover Products is excited to present the improved KLOVER MiK parabolic microphones. It has many new features and can capture clear and directional sound from distances up to 600 feet.

What's New?

- **Unbeatable Durability:** The newest KLOVER MiK models are built to last longer than any other model because they are Kevlar reinforced, which makes them twice as strong, yet safe for athletes and operators, as they break in a controlled manner so there are no dangerous sharp edges.
- **Better Modular Design:** We've made the design more modular, which makes repairs and upkeep easier. Each part is carefully designed to be easy to put together and take apart, which cuts down on downtime and boosts production.
- **Easy-to-Use Assembly Aides:** Our new setup guides, integrated into the modules, make assembling your parabolic microphones a breeze. These guides eliminate the need for scales or rulers, allowing you to set the focus effortlessly. Additionally, the keyed modules ensure that your microphones are always in the correct position, simplifying the setup process for you.
- **Adjustable Capability:** The replacement locator bushings make it possible to change the tension to suit your needs, which keeps the system working well as it ages. This feature gives users the power to keep their performance at its best with little work.
- "We hear things that were all but impossible to get before. Klover MiK has become the industry standard," says Fred Alous, lead mixer for FOX Sports and sound expert
- "We just finished our first homestand. We loved the (KLOVER MiK-16) Parabols! They sound great! You can hear the pop of the mitt and the crack of the bat so crisply," says Andrew Halverson, Broadcast Director for the Minnesota Twins Baseball Club
- "I used them on one football game and was instantly sold... I am happy to say I will not be using any other product on any football broadcast I am part of," says Steve Koubridis, Sound Engineer for CFL

Experience the Difference:
