

New printer driver product - Mirapladid PostScript Driver 2024 released

Bialystok, Podlaskie May 16, 2024 ([Issuewire.com](https://www.issuewire.com)) - Mirapladid PostScript Driver allows to print any documents to PostScript printers and to inject your content and PostScript commands into print jobs. After installation on your PC, Mirapladid PostScript Driver appears as a new printer in your system.

With Add Printer installer feature, you may create several PostScript virtual printers which will produce PostScript output to different printer ports.

Each printer has its own settings - PostScript commands and appropriate substitutions or additions to them. These settings could be adjusted with Administration software. Over 30 PostScript command can be customized or replaced. Administrator privileges required to add/remove printers and adjust settings.

Mirapladid PostScript Driver default printer is connected to the FILE: printer port. If needed, you may switch it to use different port with a Printer Properties.

The most popular use-case for this tool is to print documents to a PostScript printer on a prepared document form (template) previously designed and saved to the printer memory or hard disk, with some kind of PostScript "run" command.

Also, Mirapladid PostScript Driver could be useful to print stamps or watermarks on document pages.

It is possible to try Mirapladid PostScript Driver within 15 days before purchase. Discounts are available when purchasing multiple product licenses.
