

Power BI Consulting Services from Beyond Intranet Unlocks Insights and Drives Growth

beyond
INTRANET

Chicago, Illinois May 20, 2024 ([Issuewire.com](https://www.issuewire.com)) - Beyond Intranet, a leading business intelligence and [data analytics consulting](#) firm, today announced an expanded Power BI practice to help enterprises harness the power of data and AI to gain actionable insights.

As data volumes grow exponentially, organizations are overwhelmed and struggle to connect siloed

data sources to get a unified view of critical business metrics. Microsoft's Power BI platform is transformative, but successful implementation requires expertise.

Beyond Intranet has assembled a world-class team of certified [Power BI consultants](#) to guide businesses through the data analytics journey. With over 15 years of experience delivering solutions for Fortune 500 companies, Beyond Intranet's methodology and global delivery model accelerate ROI.

With engagements spanning industries like financial services, healthcare, manufacturing, and retail, Beyond Intranet offers end-to-end services:

Assessment - Beyond Intranet evaluates existing infrastructure and business needs to develop a roadmap optimized for the client's objectives, resources and timelines.

Design - Architects innovative data models and dashboards tailored to specific needs pertaining to users.

- HR dashboards track metrics like hiring, retention, diversity, compensation and forecast staffing risks.
- [Financial dashboards](#) provide financial KPIs, drill down analytics, and modeling for planning.
- Insurance dashboards enable fraud detection, underwriting optimization and sales tracking.

Development - Certified developers rapidly build reports, leveraging Power BI's advanced AI capabilities like natural language querying. The finance dashboard allows modeling different growth and spending scenarios to guide budgeting decisions.

Integration - Seamlessly connecting disparate data from CRM, ERP or custom systems provides users with a single version of truth. HR data integrated from payroll and talent systems powers analytics into the employee lifecycle.

Managed Services - Ongoing support and enhancements ensure maximum uptime and adoption. Regular dashboard refreshes reinforce trust in data accuracy.

With AI permeating business, Beyond Intranet augments Power BI with machine learning for next-level insights. "Sophisticated forecasting and predictive analytics enable more nuanced segmentation, personalized recommendations, and timely interventions," explained Abishek Kushwah, Delivery Manager. "Our goal is building living dashboards that continuously surface hidden opportunities."

The Power BI team has already made a significant impact across the commercial landscape:

Increased sales conversions by 18% for a leading B2B manufacturer by creating integrated dashboards spanning marketing, sales and service data.

Reduced inventory costs by 7% for a top retailer by applying supply chain analytics to optimize stock levels and logistics.

Uncovered patient risk factors and improved clinical outcomes for a healthcare provider using detailed Medicare data analysis.

"We are maniacally focused on customer success," reiterated Piyush. "Our Power BI competency accelerates data democratization so employees have on-demand access to visual insights that catalyze

growth."

Whether modernizing BI infrastructure or breaking into advanced analytics, Beyond Intranet's Power BI consulting services turn complex data into simple, actionable intelligence.
