

MKU to SHOWCASE DEFENCE INNOVATION for EUROPE at EUROSATORY 2024

Paris, France Jun 18, 2024 ([Issuewire.com](https://www.issuewire.com)) - MKU, a global leader in defence and homeland security solutions, has reaffirmed its commitment to Europe's defence market and its participation in Eurosatory 2024, showcasing their latest innovation and technology.

Over the last four decades, MKU has been building and nurturing strong relationships in Europe. Their contribution toward empowering the defence and law enforcement forces in Europe, including but not limited to Spain's border police (25,000 Body Armour), Estonian police forces (1000 body armour), German Army (Object Armouring-Containers), Norway and Swedish police forces (Ballistic Shields) has been significant. Eurosatory is one of the largest events for Defence and Homeland Safety in Europe.

MKU has been a regular participant at Eurosatory since 2004 and remains committed to exhibiting at the event to showcase its latest innovations and engage with key stakeholders. "We are excited to exhibit at Eurosatory yet again," said Mr. Neeraj Gupta, Managing Director at MKU. "Our intent is to understand how we can do more for our heroes, discuss and work towards further strengthening defence and homeland security forces in the region for a safer future for the generations to come."

This Eurosatory, MKU is displaying:

- A range of solutions for female soldiers, including tactical body armour and a covert vest. These solutions are designed for women soldiers who have to wear flat armours that hinder their movements and agility on the ground and sometimes also lead to long term tissue injuries. Flat armours also hamper their ability to handle weapons and maneuver with swift tactics and alertness.
- MW-5000, a smart and rugged sighting system for MK-19 and HK GMG grenade launchers. It seamlessly combines the power of Netro TW-4100 Thermal Sight, Netro DW-1101 Reflex Sight and Netro LW-2100 Laser Range Finder through a special mount with integrated ballistic range quadrants to increase aiming accuracy by over 65%. This gives the weapon one-shot one-hit capability during the day, at night or in foggy and dusty conditions.
- NM-3200 is an ultra-compact and lightweight Generation 2+3 monocular with a wide field of view (FOV) and high-quality optics. It can be head-mounted, helmet-mounted or weapon-mounted to provide flexibility to soldiers to carry it with ease during night missions. It offers peripheral vision with the other eye for swift tactical movements or observation.
- Kavro Doma 360, a quantum leap in tactical and uniform head protection against Level III projectiles & fragments. Developed with new-gen materials & powered by Macromatrix Ultra Technology for excellent mechanical rigidity, the helmet shell can resist rifle ammunition ranging from 7.62 x 39 mm MSC (AK-47), with a BHBT of max. 25 mm. The helmet features the patented Kavro Comfort Liner System, precision-engineered to provide advanced protection from rotational or angular impacts, which are known to cause concussions and brain injuries, in addition to the straight impacts addressed by traditional helmets. It incorporates advanced strain-sensitive materials that stiffen to absorb energy during high-impact situations. With Dual Stability Control, the liner allows for adjustments both longitudinally (front-to-back) and laterally (side-to-side), ensuring a personalized fit for maximum comfort and stability. A highly breathable micro-

lattice design of its comfort pads ensures enhanced ventilation for longer usage and durations, making the Kavro ACH 1038-T the ultimate choice for wearability.

- A range of platform protection solutions

About MKU

MKU Ltd. is a global defence and homeland security company on a mission to empower heroes. They are one of the leading solution providers for advanced optronics and ballistic protection solutions for soldiers and platforms for military, paramilitary, homeland security, police and special forces. With a customer base in over 100 countries, MKU strives to empower heroes, who stand in the line of duty, through their smart solutions that deliver confidence. Their operations are based in India, Germany and UAE. They have provided protection to over 3 million soldiers and 3000+ platforms, across 230 forces, till date. Their Kavro protection solutions offer enhanced protection for soldiers and platforms, using smart technologies, design and features. These include combat helmets, body armour, ballistic shields and ballistic solutions for naval, air and land platforms and vehicles. Their Netro night vision and thermal devices provide excellent detection, identification & recognition capability to soldiers at night to enhance their night fighting capabilities.
