

Done In One Secures Major Investment to Fuel Southeast Expansion

Riverview, Florida Jul 18, 2024 ([IssueWire.com](https://www.issuewire.com)) - Done In One, the pioneering full-arch dental implant procedure developed by Dr. Daniel Noorthoek in 2016, announces a significant milestone in its explosive growth and expansion plans.

Since its inception, the industry-disrupting Done In One procedure has transformed the lives of thousands of patients, restoring their smiles utilizing dental implants and the latest digital technology that dentistry has to offer. While the immediate loading of a final prosthesis has become more commonplace today, it was a groundbreaking concept when Dr. Daniel Noorthoek pioneered the protocol in 2016. His goal was to minimize the number of visits required for a full-arch reconstruction and, by extension, reduce patient costs.

As of 2021, Done In One has successfully operated solely out of Boca Raton, Florida, emerging as a premier destination implant center serving patients from across the United States. In January 2024, Done In One launched its initial capital raise and partnered with two private, high-net-worth family offices based in Boca Raton. The new capital infusion shall provide the fuel for Done In One to acquire existing dental practices to integrate its innovative procedures into, in addition to launching new practices. Most importantly, Done In One aims to recruit talented doctors and healthcare professionals who will impact the lives of many through its platform.

Done In One's first acquisition was in Tampa, Florida, with Boyette Dental, a reputable practice serving Hillsborough County for over 17 years. This marks the initiation of a 24-month growth phase spanning across Florida and the southeast region of the US.

Done In One quickly followed up with a second acquisition in May 2024 that shall serve as its flagship location in Boca Raton. Located in downtown Boca Raton in Mizner Park, this office, which opened its doors on July 1, will serve as the organizational headquarters where all future Done In One providers will gain the additional clinical skills required to offer this long-proven method of teeth replacement.

"We are extremely proud to establish this strategic relationship with our new partners, which will propel Done In One to new heights," said Dr. Daniel Noorthoek, the visionary founder of Done In One. "This not only validates our position as a leading provider in the full-arch dental implant realm but also provides the resources needed to expand our reach and offer a more comprehensive, reliable, and affordable option to patients needing to fully restore their smiles with dental implants. I learned early on that optimal outcomes stem from building upon the foundational principles of dentistry and incorporating what serves the patient best. The core motivation behind the Done In One procedure has always been about making a comprehensive dental solution more accessible for all individuals suffering from failing or missing teeth."

About Done In One

Done In One is a groundbreaking full-arch dental implant procedure founded by Dr. Daniel Noorthoek in 2016. Since its establishment, Done In One has become a leading destination for dental implant treatment, serving patients nationwide with a focus on enhanced patient experience and commitment to excellence and innovation.
