

## Jabra Sanitary Announces The Smart Toilet Product Line

Jabra Sanitary is proud to announce the launch of its innovative Smart Toilet product line, set to revolutionize the bathroom experience and redefine hygiene standards.

Shanghai, China Jul 10, 2024 ([Issuewire.com](http://Issuewire.com)) - Jabra Sanitary is proud to announce the launch of its innovative Smart Toilet product line, set to revolutionize the bathroom experience and redefine

hygiene standards.

Combining cutting-edge technology with sleek design, Jabra Sanitary's new range offers unprecedented convenience, comfort, and cleanliness.

## Redefining Hygiene with Advanced Technology

Jabra Sanitary's Smart Toilet line incorporates state-of-the-art features that enhance the overall bathroom experience. Highlights include:

- **Automatic Lid and Seat:** Motion sensors allow for hands-free operation, promoting a more hygienic environment by minimizing contact. The lid opens and closes automatically, ensuring cleanliness and ease of use for every member of the household.
- **Self-Cleaning Function:** Integrated UV light and electrolyzed water systems ensure the toilet bowl is sanitized after each use, reducing the need for harsh chemicals and providing a consistently clean and safe surface. This advanced cleaning system eliminates 99.9% of bacteria, offering peace of mind with every flush.
- **Personalized Settings:** Users can customize water temperature, pressure, and positioning for the bidet function, as well as adjust the heated seat and ambient lighting to their preferences. This level of personalization guarantees a comfortable and luxurious experience tailored to individual needs. The Smart Toilet also features memory settings that can store preferences for multiple users, making it ideal for family use.
- **Quiet Operation:** Designed with a quiet motor and soft-closing features, the Smart Toilet ensures a peaceful bathroom environment, enhancing the overall user experience. The near-silent flushing mechanism is particularly beneficial for households with varying schedules, ensuring that nighttime use does not disturb others.

## Commitment to Sustainability

In addition to elevating personal hygiene, Jabra Sanitary is dedicated to environmental sustainability. The Smart Toilet line features:

- **Water Conservation:** Dual-flush systems and efficient bidet functions significantly reduce water usage, helping to conserve this precious resource without compromising on performance. With smart water management technology, the toilets use just the right amount of water needed, making them highly efficient and environmentally friendly.
- **Eco-Friendly Materials:** Manufactured with recyclable and sustainable materials, the Smart Toilets are designed to minimize environmental impact while maintaining durability and high performance. The use of eco-friendly ceramics and plastics ensures that the toilets are both robust and kind to the planet.
- **Energy Efficiency:** Low-energy components and smart sensors help conserve electricity, ensuring that the Smart Toilets are both cost-effective and environmentally friendly. The energy-saving mode automatically reduces power consumption when the toilet is not in use, further enhancing its green credentials.

## Enhanced User Experience

Jabra Sanitary's Smart Toilets are designed to seamlessly blend with modern bathroom aesthetics.

Their sleek lines, minimalist design, and customizable features ensure they complement any decor while

providing a luxurious user experience.

Available in various finishes, the Smart Toilets can be tailored to fit the unique style of any bathroom.

### **Additional Features**

- **Built-in Deodorizer:** The Smart Toilets come equipped with a built-in deodorizer that activates after each use, keeping the bathroom smelling fresh and clean at all times. This feature eliminates unpleasant odors and enhances the overall ambiance of the bathroom.
- **Night Light:** An integrated night light provides gentle illumination, making nighttime visits to the bathroom safer and more convenient without the need to switch on bright overhead lights. This soft lighting is perfect for maintaining a relaxing bathroom atmosphere.
- **Foam Shield:** The innovative Foam Shield feature creates a barrier of foam in the bowl before use, reducing splashing and providing a quieter, cleaner experience. This shield not only enhances comfort but also adds an extra layer of hygiene by minimizing contact with the toilet bowl surface.

*"We are thrilled to introduce our Smart Toilet product line," said Jack, CEO of Jabra Sanitary. "Our goal is to make everyday hygiene more advanced, comfortable, and sustainable. We believe these products will set a new standard in the sanitary industry, providing unparalleled benefits to our customers."*
