Google launched its yearly developer summit Gemini Hackathon at – Google I/O 2024 in Mountain View, California. Sunder Pichai, CEO of Google, marked the summit as Google’s advanced version of tech eras with a bit of revamping and an all-about Gemini epoch. In his welcome words, he mentioned “At Google, we are living our Gemini epoch”. His words were not a satire, Google has revealed all the AI announcements in the summit that were kept hidden for a long time.

In the summit, it is confirmed, that Google’s every single app and service is inspired by AI, whether it is Gmail, Google Chrome, Android, or Docs.

Here is the synopsis of the 110-minute-long theme of the summit, including all the new launches of Google and their important facts.

### **Google search is infusing with AI revamping**

Infusion of a custom Gemini AI model in the Google search, now the search engine will serve users with AI-generated responses and a fresh website link instead of its traditional link. Users can get extensive responses for their difficult queries, diet and vacation plans, AI-driven results for motivation, and even an easier video search. These services will be accessible to U.S. users first.

### **‘Ask Photos’ to find the photos in the Gallery**

Sometimes suddenly you remember awesome party photos but you cannot find them in your gallery. Well, it is possible now with the AI-powered ‘Ask Photos’ feature that will search photos and videos for you quickly. Only you need to ask it firmly or even you can AI in photos with tasks such as personalized photo captions or highlighting specific photos.

### **Gemini 1.5 Flash – faster and more efficient**

Google launched Gemini 1.5 flash – a brand new and fastest inclusion in the Gemini model series. This newly developed model is streamlined for high-frequency, voluminous tasks to a large extent, presenting cost-effective and enhancement long context windows. Additionally, Gemini 1.5 Flash is surmounting data extraction from the bulk documents and tables, image and video captioning, summarization, and chats. A new training process, called “Distillation” made this possible, says Google.
