

BLAUSTEIN Foundation Launches Groundbreaking Human Avatar Platform

The Human Avatar platform provides human personnel that can be controlled remotely through direct transmission of commands and information to the brain of the performer - Avatar.

Monte Carlo, Monaco Oct 4, 2024 ([Issuewire.com](https://www.issuewire.com)) - The [BLAUSTEIN Foundation](#), a global leader in innovative policy development and future technology, proudly announces the launch of its revolutionary [Human Avatar Platform](#). This transformative platform is set to redefine the future of employment by enabling ordinary individuals, particularly those without formal education or with lower intellectual potential, to offer their bodies and minds for remote control by skilled operators. According to **Mr. Vadim BLAUSTEIN**, President of the BLAUSTEIN Foundation, "By 2050, we expect that 25% of the world's population will work as Human Avatars."

The Basic Idea Behind the Human Avatar Platform

At its core, the Human Avatar Platform provides a way for people to voluntarily allow their bodies and brains to be controlled by external operators who possess the specialized knowledge and skills necessary to perform complex tasks. These operators can be **human individuals or AI systems**, capable of sending commands directly to the brain of the Avatar. The platform turns an individual into a "living robot," capable of executing precise tasks remotely, regardless of the Avatar's own education or intellectual abilities.

This platform represents a new opportunity for individuals who might not have access to specialized

training, education, or cognitive abilities to participate meaningfully in the workforce. Human Avatars are guided by external commands, enabling them to perform jobs they would not be able to handle independently. The Human Avatar Platform thus democratizes access to employment, allowing millions of people worldwide to enter the workforce and contribute to the economy by offering their physical and cognitive capacities for remote control.

How the Human Avatar Platform Works

The **Human Avatar Platform** operates using [Brainjection](#) technology, which allows for direct communication between the controlling entity (the operator) and the brain of the Human Avatar. The platform offers three primary methods of control:

- **Human Operators:** Skilled individuals can remotely control Human Avatars using the [Human Avatar App](#), available on devices such as VR/AR glasses, smartphones, desktops, or tablets. Operators can be based anywhere in the world, while Avatars complete tasks remotely.
- **AI Systems:** Autonomous AI can take control of Avatars to complete tasks efficiently, issuing commands and monitoring their execution without the need for human intervention.
- **API Integrations:** External systems can connect with the Human Avatar Platform to manage Avatars for specific tasks or to integrate them into larger operational systems.

Each Avatar is a real human being equipped with specialized training and advanced devices, such as a **Brainjection communicator**, **AI controller**, video camera, and **GPS chip**. From the outside, they appear as ordinary people, but they are actually performing tasks on behalf of the operator or system. The Avatar's body and mind are controlled remotely, allowing the operator to perform work through them, irrespective of the Avatar's personal knowledge or capabilities.

Avatars operate under strict confidentiality and adhere to a stringent code of conduct. Special platform functionality protects the Avatar from harm and pain or from performing unauthorized or illegal actions.

Capabilities of Human Avatars

The **Human Avatar Platform** excels in enabling individuals to perform tasks that would otherwise require significant training or expertise. Avatars can:

- **Perform Physical Actions:** Avatars can perform a wide range of physical tasks, from simple jobs to complex conditional operations, guided by commands from the operator or AI system.
- **Communicate:** Avatars can conduct a conversation, provide and receive (collect) information controlled by an external operator.
- **Operate Systems:** Avatars can drive vehicles, including (flying) cars, and trucks, or operate computers and machinery, under the operator's supervision.
- **Execute Financial Transactions:** Avatars can be instructed to make payments or handle other financial tasks on behalf of the operator.
- **Execute Legal Documents:** The platform allows Avatars to sign contracts or agreements, ensuring that legal and business transactions can occur remotely without the operator being physically present.

Market Significance and Industry Applications

The **Human Avatar Platform** is designed to serve a wide range of industries, bringing remote task execution to sectors such as:

- **Healthcare:** Avatars can assist with medical procedures, patient care, and remote diagnostics, reducing strain on healthcare providers.
- **Construction:** Human Avatars can work in diverse environments, performing labor-intensive tasks with instructions from skilled operators outside construction areas.
- **Transportation:** The platform allows for the operation of vehicles, logistics management, and remote navigation, all handled by Avatars.
- **Military and Security:** Avatars can carry out surveillance, patrolling, or tactical missions, significantly reducing the presence of skilled operators in dangerous areas.
- **Space Exploration:** Human Avatars can be employed in space missions, performing tasks in environments where sending skilled personnel would be costly.

In addition to these core sectors, commercial applications are plentiful. The platform offers capabilities for:

- **Remote Shopping:** Operators can send Avatars to shop at distant locations, making purchases and organizing shipments without being physically present.
- **Event Attendance:** Avatars can participate in meetings, conferences, and events across the globe on behalf of operators.
- **Real Estate Viewings:** Avatars allow prospective buyers to view properties remotely, offering real-time insights through the operator's perspective.
- **Surveillance and Security:** Avatars can conduct security patrols or mystery shopping operations, performing quality control without the need for physical travel.
- **Personal Deliveries:** Operators can send gifts or important items through their Avatars, ensuring personal deliveries are handled with care.

The Human Avatar App

The Human Avatar App serves as the main interface for controlling Avatars, providing operators with an easy-to-use platform for initiating and managing Avatar sessions. Key features include:

- **Session Control:** Operators can launch a session, select an Avatar based on location or skills, and start issuing commands in real-time.
- **Live Feed:** The app provides a live video and audio feed from the Avatar's environment, allowing the operator to see, hear and react to the surroundings.
- **Payment Integration:** The app enables Avatars to complete transactions for the operator, handling financial tasks with ease.
- **Face and Object Recognition:** AI-powered recognition features allow operators to gather contextual information about the people or objects their Avatar interacts with.

The Human Avatar platform provides a fast growing international network of living individuals who serve as Avatars, enabling Operators to "ride" an Avatar in virtually every country and city around the world. This extensive reach opens up a myriad of opportunities for users to engage with diverse environments and cultures.

Ethical Considerations and Future Developments

The **BLAUSTEIN Foundation** is dedicated to understanding the ethical dimensions of the **Human Avatar Platform**. Extensive research is being conducted into the **technical, legal, commercial, medical, and ethical implications** of Brainjection and Human Avatar technology. The Foundation is committed to responsible innovation, ensuring that the platform is used ethically and safely, without

infringing on personal autonomy or privacy.

Conclusion

The [Human Avatar Platform](#) represents a monumental shift in how we view work and employment. By allowing individuals to offer their physical bodies and brains for remote control, this technology creates new opportunities for millions worldwide. Whether operated by AI, human supervisors, or integrated systems, the Human Avatar will redefine the future of labor. By 2050, this platform is expected to be the most common form of employment globally, marking the dawn of a new era in human capability.

About the BLAUSTEIN Foundation

The BLAUSTEIN Foundation is a world-leading policy institute, think tank, and global consultancy group focused on shaping the future through pioneering research and innovative technological solutions. Specializing in advanced AI, Human Enhancement, and future studies, the Foundation is committed to driving progress and solving the world's most complex challenges through ethical and forward-thinking approaches.
