

Draw A Fence Receives Provisional Patent for Innovative Tech

Alexandria, Virginia Nov 9, 2024 ([Issuewire.com](https://www.issuewire.com)) - When the founders of [Draw A Fence](#) realized they could give fence companies a fast, easy, and affordable way to create professional-grade fence and gate drawings, they knew they had to try and build the tool they had envisioned. It took some time, but in July of 2024, the first version of their instant online fence drawing generator was built, and they started testing.

Fast forward to November 2024, and several established fence companies are already using the tool to create the fence and gate drawings they need, when the need them.

Since the technology behind Draw A Fence is brand new, and nothing quite like it has been done before, the team also realized that they needed to protect their IP and their invention, and the team is pleased to report that on Tuesday, November the 4th, 2024, they received a provisional patent for their online fence drawing generator process.

While the team works on solidifying that patent, they're back to doing what started it all: building drawing generators that allow fence companies to create professional fence and gate drawings that would ordinarily take hours in a matter of minutes.

Says Tamara Aspeling, founder and 25 year fence industry veteran, "We've watched fence companies struggle to produce fence and gate drawings when they need them for decades. We could not be more pleased to bring the industry a tool that makes it so fast, affordable and easy, and we can't wait to get all the fence companies out there checking fence drawings off their to do list.

Since the fence industry is worth \$30 billion annually, and largely ignored in the construction tech world, this patent pending fence drawing system could not come at a better time either.

"Fence companies are moving into the future with digitization, but it's a slow process, and tech companies need to meet them where they are at." Adds Aspeling. "That's exactly what we're doing with our simple, easy-to-use fence drawing solution."
