

Half of the States in the US are now Partnered with Mcmtech for Statewide Agency Software Solutions

Public safety departments across the US increasingly prefer Mcmtech's tested and trusted software solutions for asset, inventory, and work order management.

Birmingham, Alabama Nov 4, 2024 ([Issuewire.com](https://www.issuewire.com)) - Twenty-five states across the U.S. are now partnered with Mcm**tech** for statewide software solutions. This “half the country” achievement highlights the company’s commitment to providing innovative [asset, inventory, and work order management solutions](#) for the complex needs of government entities.

Mcm**tech**’s solutions offer robust features that can be used in a wide range of industries and sectors but are purpose-built for mission-critical operations. They are also the only solutions that can integrate with radio systems, providing unmatched efficiencies for public safety communications departments.

"Our mission has always been to help public safety agencies improve accuracy, preparedness and accountability, while saving time, money, and equipment," said Tom Bartels, president and chief executive officer of Mcm**tech**. "Achieving 25 statewide customers is a testament to the quality and reliability of our solutions across the country."

This milestone was reached when Rhode Island Emergency Management recently signed on to implement Mcm**tech**’s [Commsshop](#) statewide. Mcm**tech** has systems active in 40 states, as well as federally and in 13 other countries. Several states also have multiple state agencies using Mcm**tech** solutions.

How Mcmtech Got Here and Where It's Going

One of Mcmtech's biggest draws is that it has the only asset management software specifically designed to meet the critical challenges of public safety communication systems. Kurt Abts, vice president of application development and a true tech innovator with over 35 years in wireless and public safety software applications, remembers working closely with Mcmtech's first public safety customers in the early 2000s custom-building a solution to manage their radio equipment and infrastructure.

"We learned which features were standard requirements and how to integrate them seamlessly, and we learned which functions varied greatly by client and how to adjust them appropriately," Abts said of these initial projects. "When we saw how grateful the departments were and the important need this software fulfilled, we knew we had something that could help agencies across the country."

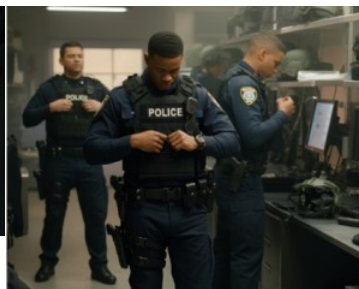

With each new customer, Mcmtech gains industry insight allowing the company's innovative team to continuously advance its offerings for real world public safety use. This tradition continues today. "Just this year we launched a new mobile app, a new [inspections module](#), and a new [BDA/DAS tracking add-on](#), all developed in response to our customers' needs," said Abts.

Thanks to Mcmtech's flexible and scalable Motiondeck platform, applications and features are easily added or removed based on customer requirements. "As excited as we are about our growth from a business perspective, we are equally so in terms of product evolution," said Bartels. As individual customers contribute with new needs and ideas, the menu of options grows for all.
