Cheyenne, Wyoming Nov 24, 2024 ([IssueWire.com](https://www.issuewire.com)) - Rathna Kumar, a visionary inventor and founder of Gravity Infotainment Inc., is proud to announce the launch of the Global Time (GTP), a ground-breaking innovation that introduces a unified, high-precision time standard for efficient global communication and coordination.

The GTP addresses the limitations of traditional timekeeping systems, including time zone complexity and inconsistencies. This revolutionary technology provides a unified time standard, eliminating the complexities and inconsistencies associated with traditional timekeeping systems, enabling seamless international interactions and collaborations.

"The Global Time is a game-changer for global communication and coordination," said Rathna Kumar, inventor of GTP. "By providing a unified time standard, GTP enables efficient global communication and coordination, benefiting various industries and aspects of our daily lives."

Gravity Infotainment Inc. has filed a comprehensive suite of intellectual property applications, encompassing patents, copyrights, and trademarks, with one registration already secured and additional applications currently under review.

The GTP offers numerous benefits, including:

- Simplified time zone management
- Improved accuracy and precision
- Enhanced global coordination and collaboration
- Increased efficiency in data transmission and networking

The GTP has far-reaching implications across various industries, including telecommunications, finance, healthcare, transportation, and education. Its applications include:

- Global collaboration and communication
- Financial transactions and trading
- Healthcare and medical research
- Transportation and logistics
- Education and research

Gravity Infotainment Inc., based in Cheyenne, Wyoming, is a cutting-edge technology company dedicated to innovating and simplifying global communication and coordination. For more information about the Global Time, please visit www.gravityinfotainment.com
