

PitPat Announces Completion of CEO Challenge - Qualification Recap

Houston, Texas Dec 25, 2024 ([IssueWire.com](https://www.issuewire.com)) - [PitPat](#), the world's largest online competition platform, is dedicated to providing innovative virtual racing experiences for running and fitness enthusiasts. As a global leader in the sports industry, PitPat offers users the opportunity to interact with other athletes around the world, while providing a variety of events where every participant can find their own challenge.

The latest edition of the CEO Challenge has now concluded, and PitPat is excited to share the results of the qualification round. The event kicked off at 11:00 PM EST on December 23, 2024, with participants racing towards a 6-mile goal. The competition was divided into two stages: the qualification round and the final, with a registration fee of \$20. PitPat Premier members enjoyed the benefit of free registration.

Through the qualification round, participants had the chance to win from a \$2,500 prize pool, as well as earn a spot in the final stage. The top 100 participants earned PitPat points and were automatically advanced to the finals.

In the qualification round, the top three winners received \$1,000, \$500, and \$300 in prize money, respectively. Participants finishing in positions 4 through 10 received \$100 each. Additionally, the top 100 participants earned PitPat points, ranging from 130 points down to 31 points, based on their performance. The winners of the qualification round will now compete in the final CEO Challenge for additional prize money.

PitPat founder Kevin Zhang implied that the CEO Challenge is not a new event, but every edition offers users a fantastic opportunity to showcase their skills. It is not just a competitive platform; it is an opportunity for global running enthusiasts to demonstrate their capabilities and push their limits. PitPat has always been committed to creating a fair, open, and innovative competition environment where every user can find their own challenge and enjoyment. In the future, PitPat will continue to drive technological innovations on our platform, bringing more exciting events and interactive competitions to our users. PitPat will continue to expand its event offerings, introducing more engaging and challenging activities to a global audience.

To help users better engage in virtual races, PitPat can be connected through two major treadmill brands, [DeerRun](#) and [SupeRun](#), to experience online competitions. With these treadmills, users can synchronize their exercise data with the PitPat platform and participate directly in various online events. This technological integration not only makes the workout experience more immersive but also allows treadmill users to compete in real-time with participants around the world, offering a more interactive and challenging fitness experience.

Handrail Design - A Dual Guarantee of Safety and Comfort

The handrails of the treadmill are made of high-strength carbon steel, which exceeds international standards in hardness, ensuring that they can withstand high-intensity exercise loads. The outer layer of the handrails is formed using professional CNC machining techniques and is coated with a matte finish, providing excellent hand grip and anti-slip effects, even when the hands are sweaty. Additionally, the handrails are ergonomically designed to reduce wrist fatigue from prolonged use. This thoughtfully designed handrail not only enhances safety but also provides users with a more comfortable and stable experience.

Running Belt Material - The Perfect Combination of Durability and Stability

The treadmill's running belt uses a unique five-layer anti-slip material structure, meticulously processed to provide strong anti-slip performance, ensuring that there is no risk of slipping even at high running speeds. The running belt also incorporates three layers of patented support structures, significantly improving its durability and stability. Tested in real-world conditions, this running belt can last up to two years with daily use of two hours, maintaining excellent performance even in high-frequency usage environments. Furthermore, the running belt is designed with shock absorption to effectively reduce the impact on the knees and ankles, providing users with a more comfortable running experience while lowering the risk of injury.

Optimized Net Weight - The Perfect Balance Between Portability and Durability

Most of the treadmill components are made of composite materials, which combine high strength and flexibility while significantly reducing the overall weight, making the treadmill more suitable for home use. The lightweight design makes it easier for users to move the treadmill around at home, whether it's to a sunlit window or tucked into a corner. Despite its lightweight construction, the design ensures the treadmill remains sturdy and provides stable support during intense exercise. For users who need to frequently adjust their exercise space, this optimized design is undoubtedly the ideal choice.

About PitPat

PitPat is not just an online competition platform but also a global sports community. On PitPat, users can enhance their skills by participating in virtual races and share experiences and results with running enthusiasts from around the world. The platform offers a variety of events, catering to athletes of all levels. PitPat will continue to advance the development of virtual races and continuously optimize its technological platform, aiming to provide users with higher-quality and more enjoyable fitness experiences.
