

KDV Flow Celebrates its Anniversary in the Benelux Region

Offering Industry-Leading Flow Control Solutions since opening its Benelux office last year, KDV Flow has worked closely with local customers to deliver reliable, precision-engineered solutions for demanding industrial applications

Melbourne, Australia Feb 10, 2025 ([IssueWire.com](https://www.issuewire.com)) - KDV Flow, a global manufacturer and distributor of high-performance industrial flow control products, marks its first year of operations in the Benelux region. This expansion has enabled engineers and professionals in industries such as water treatment, oil and gas, food and beverage, and chemical processing to access KDV Flow's comprehensive range of products and technical support more easily.

Comprehensive Product Offering for Complex Applications

KDV Flow's product portfolio is designed to meet the unique operational challenges faced by industries in the Benelux region, offering solutions that prioritize efficiency, durability, and reliability:

[Diaphragm Valves](#) – Built for high corrosion resistance and excellent sealing, commonly used in water treatment and chemical industries.

[Ball Valves](#) – Known for superior sealing performance and durability in high-pressure applications, particularly in oil and gas pipelines.

[Butterfly Valves](#) – Lightweight, cost-effective flow control solutions suitable for large-scale water distribution and food processing.

[Check Valves](#) – Essential for preventing backflow and protecting equipment in process systems.

[Plug Valves](#) – Engineered for high-viscosity fluids and abrasive media, ideal for slurry services and complex industrial environments.

[Lined Valves](#) – Offering exceptional corrosion resistance for chemical handling and high-purity

applications in food and beverage production.

"Our focus has always been on reliability and performance," said Daniel Carr, Regional Director. "We understand the challenges faced by engineers when choosing flow control solutions, and our product range is designed to help overcome those challenges while maintaining operational efficiency."

Addressing Industry-Specific Needs

KDV Flow's solutions are tailored to meet the diverse demands of key industries:

Water Treatment: Valves designed for handling aggressive chemicals and providing reliable flow control in wastewater treatment and purification processes.

Oil and Gas: High-pressure, high-temperature-rated valves that ensure operational safety and longevity in upstream, midstream, and downstream processes.

Food and Beverage: Hygienic valve solutions that meet stringent standards for cleanliness and process integrity.

The Benelux region's central location and growing demand for advanced flow control products make it a critical part of KDV Flow's expansion strategy. The company remains committed to delivering high-quality solutions and responsive support to its customers across the region.

"Our local presence allows us to provide faster lead times and technical support that is essential for ensuring smooth operations," added Carr. "We're excited about the continued growth opportunities and look forward to deepening our partnerships in the region."

About KDV Flow

KDV Flow is a global leader in manufacturing and distributing high-performance flow control products for industries ranging from water treatment and oil and gas to food and beverage and chemical processing. With a reputation for reliability, innovation, and exceptional service, KDV Flow continues to support critical industries with tailored solutions and expert technical support.
