

Kernel Migration for SharePoint Introduces Advanced Features for Seamless Data Migration

New York City, New York Feb 12, 2025 ([Issuewire.com](https://www.issuewire.com)) - KernelApps is delighted to introduce the enhanced version of Kernel Migration for SharePoint that will make the user experience even better.

There are several new features and enhancements made to this tool to maintain consistency and integrity of data. The users will now be able to migrate SharePoint data with ease, security, and efficiency. The tool will support transfer of data from Microsoft Planner to Planner and cloud storage solutions to SharePoint.

Mr. Sudesh Kumar, Director of Operations, KernelApps stated, “We are keen to offer regular feature updates to meet the growing needs and interest of the users. The tool is upgraded to support even complex migrations and . These features are one of the stepping stones in our journey to provide a user-friendly SharePoint migration solution. ”

What New Features are Introduced?

- Backup SharePoint data to your system locally.
- Support tenant to tenant Microsoft Planner and Teams migration.
- Pre-migration analysis helps to run an error-free migration.
- Migrate data from cloud storage (AWS S3, Dropbox, and Box) to SharePoint.
- Migrate site collections, lists, libraries, etc. in original hierarchy.
- Optimized migration of SharePoint sites and folders.

The upgraded version will now facilitate connecting OneDrive accounts simpler. Transfer of data from public folder, Teams, and other source options is just a matter of a few minutes. The tool is compatible with all versions of SharePoint and you can download the trial version to get yourself familiar with the functionality.

About Kernel Migration for SharePoint

Kernel Migration for SharePoint is an extensive migration tool that migrates all of the SharePoint data, such as sites, libraries, lists, workflows, etc. Apart from this, the tool also facilitates data transfer from public folders, OneDrive, Google Drive, Microsoft Teams, and Planner. It comes with a simple interface that allows tech-savvy and non-tech users navigate through it easily. The smart filters integrated into this tool makes it easy to perform selective transition of data and schedule migration jobs as needed. Once the process is completed, the tool provides migration report and summary to allow users get insights on the process performed.

This tool is a must-have for businesses that regularly migrate data between SharePoint and other cloud storages.
