

Kingsley Water Damage & Fire Cleanup Partners with Kahi and Encircle to Resolve Equipment Location Questions

Columbia, South Carolina Feb 19, 2025 ([Issuewire.com](https://www.issuewire.com)) - Kingsley Water Damage & Fire Cleanup Partners with Kahi and EnCircle to Resolve Equipment Location Questions

In restoration, it's a question as old as time. Did we have enough documentation? Now, the resolution is here! Kingsley used an innovative approach to verify that all equipment, and equipment types, were on the job site. Kahi sensors allow you to track the movement of equipment from your warehouse to your vehicle, to your job site, and back. EnCircle allows you to pair your job site address with your CRM for documentation. For Kingsley, that means proof of life cycle for insurance adjusters and reports.

How do you decide which sensors are best for you? Head over to [Kahi.io](https://kahi.io) and compare sensors, chose your preferred gateway, and get started!

Once you order your sensors, plan to install and assign them to Kahi's platform. Then, pair your assessments, with your documentation platform, and wall-ah! Your equipment will sync with your platform, allowing you excess wiggle room for documentation errors and questions!
