

The Future of Remote Patient Monitoring: How DocVoice is Driving Change in Healthcare

New solutions have been making a mark in the market for more than five years to improve quality care for both patients and providers. The remote patient monitoring tool DocVoice, offers a seamless way to monitor vitals and establish provider-patient

Hollywood, Florida Feb 27, 2025 ([IssueWire.com](https://www.issuewire.com)) - DocVoice, a HIPAA-compliant RPM tool developed by TechRev Health in 2021, is designed to improve home-based patient care for both patients and providers. The healthcare solution has now become the choice of physicians for consistent visibility into patients' health.

DocVoice is beneficial for patients to keep vital records for seeking assessment of their condition before, after, or during ongoing treatment. The tool has been developed with Chronic Care Management in mind and is equipped with the following features:

- **Dashboard** with necessary details (patient's name, provider's information, recorded vitals).
- **Spider graph** to visualize and interpret patient metrics (BP, glucose level, BMI/weight, oxygen saturation, and heart rate).
- **Voice reminders** to alert patients if they miss taking readings.
- **Appointment scheduling** for better patient-provider coordination.
- **In-built messaging** to establish communication between patients and providers.

"The idea for [DocVoice](#) stemmed from personal challenges—frequent visits to healthcare providers and the difficulty of sharing complete wellness reports due to missed vital readings. Recognizing this gap, and as the CEO of a tech-driven company, I felt a strong responsibility to develop a technology-driven solution that enhances healthcare accessibility. Through continuous interactions with physicians and individuals managing chronic diseases, my team and I built a prototype, integrated cutting-edge technology, and refined it into what is now DocVoice—a seamless, tech-powered tool designed to improve better patient outcomes, enhance chronic care management, patient care and communication," said **Vic Narang, CEO of TechRev Health**.

About DocVoice

DocVoice is a leading remote patient monitoring (RPM) solution provider, helping healthcare professionals deliver quality care through innovative technology. It is committed to improving patient health and provider efficiency.
