

Ultra Librarian & Sunstream Global Technologies Partner to Ease Simulation Model Discovery for Engineers

Ultra Librarian®, an Accelerated Designs brand and Sunstream Global Technologies, Inc a leader in engineering data acquisition and development are partnering to reduce the pain and time required for engineers to find and source simulation models.

Bengaluru, Karnataka Feb 27, 2025 ([Issuewire.com](https://www.issuewire.com)) - The Simulation Model Challenge

One of the challenges for engineers to take advantage of the tremendous gains that can be realized from a simulation-driven design methodology is finding and sourcing the models needed to run accurate simulations. Currently models are fragmented across various vendor websites and platforms making it a significant challenge for engineers to find verified models for all the parts they need to analyze. This is time engineers often don't have and as result either opt to reduce and skip simulation activities all together.

"Collecting simulation models for the devices in your design is a slow, manual process requiring engineers to hunt across multiple sources and websites at a time", said Manny Marcano President of Ultra Librarian an Accelerated Designs Company "Just as we did for CAD geometries we are looking to change this paradigm and make simulation models as easy to find and use as our CAD models are now. I couldn't think of a better partner then Sunstream to help us achieve this goal."

"We are excited to work with the Ultra Librarian team and assist in their mission to bring much need productivity and efficiency to the engineer's desktop" said Unni Mecheeri Director of Operations at Sunstream Global, "Our team is committed to help make simulation model discovery as easy and straightforward as possible."

Availability

Ultra Librarian and Sunstream will be rolling out the initial batch of models in 1H 2025 and invite any IC manufacturers who wish to participate in this effort to [contact us](#) so we can include your models in our new simulation model discovery library.

About Sunstream Global Technologies, Inc

Sunstream Global Technologies specializes in providing solutions and services in Electronic Design, Mechanical Design, Product Development, and associated IT services. Sunstream provides products, solutions, and services to make OEMs more efficient in their business. They provide solutions in the area of Product Development, Sustenance Engineering, Re-Engineering, Product Environmental Compliance and Engineering Process Outsourcing. Sunstream is the leading channel partner of Cadence Design Systems in the India market.

Visit Sunstream at www.sunstreamglobal.com for more information.

About Ultra Librarian

Ultra Librarian® is the world's largest part library, providing all the component information designers need to make smart decisions for their next project. Quickly find verified parts in our ever-expanding database of pre-built models in over 30 native CAD formats. Receive unlimited access to free schematic symbols, footprints, 3D Models, simulation models, reference designs, and many other helpful design resources from industry leading manufacturers. Get back to what matters most, innovation, not part creation. For more information about Ultra Librarian or to download CAD models from its library of over 16 million parts for free, visit www.ultralibrarian.com or contact the Ultra Librarian team at info@ultralibrarian.com.
