

Amerigo Scientific Announces the Rollout of Anti-Human AITRL, Bringing Premium Polyclonal Antibodies to Researchers

Amerigo Scientific announces the launch of its Anti-Human AITRL product, aiming to provide researchers and laboratories with enhanced resources for immunological research and analysis.

New York City, New York Mar 16, 2025 ([Issuewire.com](https://www.issuewire.com)) - Amerigo Scientific, specialized in supplying high-quality research products for the life science industry, is proud to present the new [Anti-Human AITRL antibody](#), a highly qualified polyclonal antibody to promote advanced research in immunology and other fields.

“With the addition of Anti-Human AITRL to our growing portfolio of productive antibodies, we are delighted to present this to the market,” said the marketing manager at Amerigo Scientific. “This product is a testament to our dedication to the scientific community by providing the highest quality research tools that can enable innovation and discovery in life science.”

What is AITRL?

AITRL (activation-induced tumor necrosis factor receptor ligand) is a member of the TNF superfamily that is involved in several immune responses. It is also important in activating immune cells like T cells and modulating the inflammatory and immune response. Studies suggest the improved availability of such highly specific and reliable polyclonal antibodies will greatly support the research community in deciphering mechanisms of immune activation and tolerance in health and disease.

Amerigo Scientific’s Anti-Human AITRL antibody is generated by immunizing rabbits with synthetic peptides that align with the AITRL protein of humans, ensuring the quality and reliability of the end product. The antibody is also purified and validated for use in different methods, including Western blot, ELISA, and immunohistochemistry, so researchers can be confident using it for diverse applications needed in their research. The Anti-Human AITRL antibody is a valuable tool for scientists studying the role of AITRL in health and disease, as well as those developing anti-AITRL therapeutic strategies that will benefit humans.

The Anti-Human AITRL antibody can be offered in different formats and sizes to accommodate the different requirements of researchers. Besides the quality of the antibodies, Amerigo Scientific is calling for the same accessibility in terms of support and resources for researchers. The team is available to answer any and all questions and guide on best use to ensure maximum success for research. About Amerigo Scientific

Amerigo Scientific, as a recognized distributor in the United States, collaborates closely with leading manufacturers worldwide and invites cooperation to all companies and institutions in the branch of reagents, kits, antibodies, and many other products for life science, biochemistry, and biotechnology. Its professional team is equipped with excellent technical support and thoughtful customer service. As most of its employees have earned a graduate (Ph.D. or M.S.) degree in life science, they can comprehend customers’ questions or concerns and are always ready to provide individualized customer service of

high standards.
