The most popular straightening treatments available with 19 million smiles treated worldwide, Invisalign clear aligners use custom-made, removable trays that gradually shift teeth into their desired positions. Using advanced 3D imaging technology and proprietary SmartTrack material, Invisalign aligners are designed to be comfortable and virtually invisible, making them a preferred option for those who want to straighten their teeth without the noticeable appearance of traditional braces.

How Invisalign Works

Invisalign treatment begins with a free consultation with an expert dentist where a detailed treatment plan is developed based on the patient's specific dental needs. Using digital scans and advanced 3D imaging, our elite dentist will create a precise roadmap for teeth movement throughout the treatment. The aligners apply gentle, constant pressure on the teeth, gradually shifting them into their proper positions over time. Each aligner is worn for approximately 20-22 hours per day and changed every 1-2 weeks, with patients visiting their orthodontist for check-ups every 6-8 weeks to monitor progress.

Unlike traditional braces, Invisalign aligners are removable, making it easier to eat, drink, and maintain proper oral hygiene. The smooth, BPA-free plastic material ensures minimal irritation to the gums and cheeks, a common issue with traditional braces. Invisalign also offers fewer in-office visits compared to metal braces, providing added convenience for busy patients.

The Science Behind Invisalign

Invisalign's unique ability to straighten teeth is based on advanced biomechanics and computer modelling. Each aligner applies calibrated force to specific teeth at strategic times, achieving gradual, controlled movements. Through the use of ClinCheck software, which maps out the entire treatment plan in 3D before aligners are even created, Invisalign ensures precision and optimal results. This level of predictability and control allows Invisalign to address complex orthodontic issues, including rotations, extrusions, and bite corrections, with great success.

Leading Experts in Kent

[Smileology](#) is the only Platinum Invisalign provider in Kent. Our elite-status dentists, including **Syed Shah, Behzad Manzoor, Raheel Aftab, Nasir Ahmed, Paul Tweddell and Luisa Rego** are recognised as **Platinum Invisalign Providers**. As experts in Invisalign treatment, they have treated more than 2000 cases with excellent results for patients seeking smile transformation.

Dr Syed Shah is the principal dentist at Smileology, a Platinum Invisalign provider, and is renowned for his expertise in designing customised treatment plans for patients across Kent. Along with Behzad Manzoor, Raheel Aftab, Nasir Ahmed, Paul Tweddell, and Luisa Rego, these leading providers are dedicated to helping patients achieve their desired smiles with the latest advancements in clear aligner technology.

"We are proud to offer Invisalign as an alternative to traditional braces. Our goal is to provide our

patients with a treatment that is both effective and minimally disruptive to their lifestyle,” said Syed Shah. “With the technology behind Invisalign and our commitment to personalised care, we ensure that each patient receives the best possible results.”

Treatment Duration and Cost

Invisalign treatment generally takes between 6 to 12 months, depending on the complexity of the dental issue being addressed. For simpler cases, treatment may be completed in as little as 6-8 months, while more complex cases can take up to 12 months which is half of conventional braces. The cost of Invisalign varies from £3000 to £6000 in Kent. Smileology Kent is the only practice that offers Invisalign treatment from £2000. While the upfront investment may seem high, Invisalign offers several benefits, including fewer office visits, a more discreet appearance, and greater comfort.

Smileology Dental Practice: Flexible Financing Options

Smileology Dental Practice, with locations in **Rochester, Maidstone, Sevenoaks, and Medway**, offers flexible financing options to help patients manage the cost of their Invisalign treatment. Additionally, for those with dental insurance, it's recommended to verify if Invisalign is covered, as many plans provide partial reimbursement similar to traditional braces.

The Future of Orthodontics

With continued innovation, Invisalign remains at the forefront of orthodontic treatment, offering a solution that fits into the lifestyles of modern patients. For those considering teeth straightening treatments in Kent, visiting Smileology Platinum Invisalign providers like Syed Shah, Behzad Manzoor, Raheel Aftab, Nasir Ahmed, Paul Tweddell and Luisa Rego ensures expert care and optimal treatment results.
