

Ksolves India Limited Launched Data Flow Manager - The First-Ever UI-Driven NiFi and Data Flow Management Tool

Designed for Apache NiFi, whether it is hosted on-premises, hybrid, and private clouds with 24x7 Enterprise NiFi support

Noida, Uttar Pradesh Jan 14, 2026 (IssueWire.com) - Ksolves India Limited, a leading software development company publicly listed on the mainboards of NSE and BSE, has announced the launch of its flagship NiFi Big Data product, **Data Flow Manager**. It is the **first of its kind and the only UI-driven tool to manage Apache NiFi and data flow deployments**. In addition, it offers **24x7 Enterprise NiFi support** to ensure peak efficiency and seamless data operations. This groundbreaking innovation is significantly cost-effective, saving around 75% on operational costs compared to other Enterprise NiFi solution providers.

Enterprise NiFi comes with a set of certain challenges, as follows:

- No UI-based tool to deploy data flows
- The lack of provision for scheduled data flow deployments
- No deployment history and rollback mechanism for data flows
- High dependency on the service provider
- No flexibility to use open-source Apache NiFi
- High operational costs and licensing fees

Ksolves India Limited's Data Flow Manager overcomes these challenges, empowering organizations to manage open-source NiFi and data flows from a single, unified interface.

"With Data Flow Manager, we have redefined data flow management for NiFi hosted on any

environment, whether it is on-prem, cloud, or hybrid. It enables businesses to automate and schedule data flow deployments, quickly roll back to previous versions of data flows, and maintain complete control – all without vendor lock-in. It’s a cost-effective solution that brings UI efficiency to NiFi data flow management.”, said Ratan Srivastava, CEO and founder of Ksolves India Limited.

Data Flow Manager: A Cost-Effective and Feature-Rich Tool with 24x7 Enterprise NiFi Support for Streamlined Data Flow Management

Enterprise NiFi restricts businesses to proprietary solutions, limiting their ability to use open-source NiFi. Also, they are exclusively available for the public cloud. Ksolves India Limited’s Data Flow Manager supports Apache NiFi that works across all environments – on-premises, hybrid, and private clouds.

Here are a few other reasons why Data Flow Manager outperforms other Enterprise NiFi solutions:

- **UI-Based Data Flow Deployments:** The only solution offering a user-friendly interface to automate NiFi data flow deployments, eliminating complex configurations.
- **Scheduled Data Flow Deployments:** Businesses can schedule data flow deployments during off-business hours with just a few clicks, ensuring minimal downtime.
- **Multi-Level Approval Workflow:** Organizations can define multi-level approval hierarchies for scheduled data flow deployments, ensuring compliance and preventing unauthorized changes.
- **Version Control and Rollback:** Every modification to data flows is tracked and saved, allowing businesses to roll back to previous versions of data flows effortlessly.
- **Audit Log for Data Flow Deployments:** With a complete history of data flow deployments, businesses can track, monitor, and analyze all user actions, including who initiated, modified, or approved deployments.
- **24x7 Support:** Proactive support round-the-clock with the fastest response and resolution times.
- **No Dependency on Third-Party Service Providers:** Gives businesses full control over data flow management, enabling them to create and deploy custom processors, upgrade NiFi, and handle deployments – all without external dependencies.

A few other features of Data Flow Manager are:

- **Advanced Security with Role-Based Access Control:** Granular access controls ensure that only authorized users modify, manage, and deploy data flows.
- **Flow Analysis & Flow Generation with AI:** Businesses can detect inefficiencies, analyze performance, and optimize data flows. They can generate data flows for common use cases using AI.

Monitoring & Alerts: Proactive monitoring and alerts provide complete visibility into NiFi processor health, queue status, and flow performance.

24x7 Enterprise NiFi Support to Achieve Peak Performance

In addition to managing your data flows, Data Flow Manager offers 24x7 [Enterprise NiFi support](#) to ensure that your NiFi instance runs smoothly at optimal performance without any disruptions.

- Automated NiFi Cluster Installation
- Rolling NiFi Cluster Upgrade & Patch Management
- SSO, Kerberos, LDAP Integration

- NiFi Cluster Logging, Monitoring & Alerts
- Performance Tuning & Load Balancing
- Automated Backup & Disaster Recovery

Industry Impact

Businesses using Data Flow Manager are experiencing significant cost-saving and time-saving, accelerated data operations, and enhanced security and compliance.

One of the leading shipping and packing companies observed:

- 50% reduction in data flow deployment time
- 60% decrease in deployment errors
- Improved operational efficiency
- Reduced operational costs from \$1 million to \$120K

Businesses looking to gain control over their NiFi environment and data flows, reduce NiFi operational costs, and accelerate their data operations can use Data Flow Manager and experience a big difference firsthand.

About Ksolves India Limited

Ksolves India Limited, a publicly listed company on NSE and BSE, is a dynamic software development company specializing in diverse technologies – Big Data, AI and ML, Salesforce, Odoo, DevOps, Microserver, and website & application development. Established by Mr. Ratan Srivastava, the company has become a go-to trusted partner for businesses looking for enterprise-grade, scalable, custom digital solutions. With 500+ talented minds, the company is committed to delivering excellence and empowering businesses with innovative solutions.
