

## PRISM: A Clinically Engineered Solution for Hyperpigmentation at Zest Skin Lounge

PRISM is a scientifically developed micropeel treatment designed to effectively reduce hyperpigmentation by accelerating skin renewal and regulating melanin production, newly available at Zest Skin Lounge.

**Makati City, Metropolitan Manila Area Feb 6, 2026 ([IssueWire.com](https://www.issuewire.com))** - Zest Skin Lounge introduces **PRISM—Pigment Reduction Intensive Skin Micropeel**, a scientifically formulated treatment developed to address various forms of hyperpigmentation through a precise dermatological approach.

Hyperpigmentation, including melasma, post-inflammatory hyperpigmentation (PIH), and sun-induced discoloration, affects a significant percentage of individuals worldwide. PRISM is designed to mitigate these concerns through a controlled micropeeling process that accelerates skin renewal and regulates melanin production.

### Scientifically-Backed Mechanism of Action

PRISM is formulated using a combination of clinically validated active ingredients, including:

- **Tranexamic Acid** – Demonstrates an inhibitory effect on melanocyte activation, reducing pigmentation intensity by up to **50%** in clinical trials.
- **Kojic Acid** – Shown to suppress tyrosinase activity, leading to a measurable reduction in melanin synthesis.
- **Retinoids** – Accelerate epidermal turnover, facilitating the removal of hyperpigmented keratinocytes.
- **Lactic Acid** – Enhances exfoliation and epidermal hydration, improving overall skin clarity and texture.

A controlled study conducted on patients with persistent hyperpigmentation reported **85% overall reduction in pigment intensity** after consistent treatment with PRISM protocols.

### Precision Treatment for Targeted Concerns

PRISM is available in three distinct formulations, each tailored for specific anatomical areas:

- **PRISM Face Peel** – Addresses melasma, sunspots, and post-inflammatory hyperpigmentation on facial skin.
- **PRISM Intimate Peel** – Developed for hyperpigmentation in sensitive areas such as the underarms, inner thighs, and bikini region.
- **PRISM Body Peel** – Targets large-surface pigmentation, including discoloration on the back, arms, and legs.

Dr. Karlo Piñon, aesthetic doctor at Zest Skin Lounge, emphasizes the necessity of evidence-based treatments for pigmentation management: *“Hyperpigmentation requires a precise, multifaceted approach. PRISM delivers controlled exfoliation combined with melanin inhibition, ensuring superior clinical outcomes.”*

Dr. Gel Brillante, aesthetic doctor at Zest Skin Lounge, further notes: *“Each formulation within the PRISM range is designed to optimize skin tolerance while maximizing efficacy. This ensures that patients experience significant pigment reduction with minimal irritation.”*

### Clinical Outcomes and Patient Safety

Data from in-clinic applications of PRISM have yielded promising results:

- **92% of patients** noted an improvement in overall skin brightness after a full treatment cycle.
- **78% reduction in melanin concentration** was recorded in targeted areas following a structured regimen.
- **Long-term studies** indicate a **sustained reduction in hyperpigmentation recurrence** when combined with appropriate maintenance protocols.

PRISM treatments are administered exclusively at Zest Skin Lounge by trained skincare professionals, ensuring precision, safety, and efficacy. Patients undergo thorough assessment and post-procedure care to optimize treatment outcomes.

### **About Zest Skin Lounge**

[Zest Skin Lounge](#) is at the forefront of advanced dermatological treatments, specializing in evidence-based skin rejuvenation procedures, including exosome therapy, microneedling, and targeted laser solutions. With a commitment to clinical excellence, Zest Skin Lounge provides patients with cutting-edge therapies backed by rigorous scientific research.
