

Solana Chooses India For Their First-Ever DePIN Summit

Bengaluru, Karnataka Feb 6, 2026 ([IssueWire.com](https://www.issuewire.com)) - Solana, a leading layer-1 blockchain and the sixth largest by market capitalization, has selected India as the host country for its first-ever DePIN (Decentralized Physical Infrastructure Network) Summit. Solana foundation's milestone event happening in India shows the country's rising prominence in the Web3 ecosystem and its growing importance in decentralized infrastructure development.

The Solana DePIN Summit will bring together a diverse group of global and Indian startups innovating in the DePIN space. The one-day event will also provide Web3 entrepreneurs in India with an exclusive opportunity to pitch their ideas to global venture capitalists (VCs) and engage with the international developer community.

What is DePIN?

DePIN (Decentralized Physical Infrastructure Network) is an emerging Web3 model that integrates physical infrastructure—such as IoT devices, energy grids, and wireless networks—into decentralized blockchain-based platforms. Unlike traditional infrastructure models, which are owned and controlled by centralized entities, DePINs distribute ownership and management through blockchain technology, fostering greater accessibility and efficiency.

DePINs are particularly impactful in developing economies, enabling faster infrastructure deployment in areas where traditional models have struggled. With the rise of DePIN projects globally, India is emerging as a key target market for expansion.

Wifi Dabba Joins as Title Sponsor

Among the key supporters of the Solana DePIN Summit is [Wifi Dabba](#), a Bengaluru-based startup that operates on a DePIN model to expand broadband connectivity in Tier 2 and Tier 3 cities across India. Backed by Y Combinator, Wifi Dabba has been actively involved in India's PM-WANI initiative. The company partners with Local Cable Operators (LCOs) to democratize internet access. Its DePIN model allows it to subsidise the infrastructure costs for LCOs to expand their on-ground operations.

Shubhendu Sharma, co-founder of Wifi Dabba, expressed enthusiasm about the event:

"Solana choosing India for their first-ever DePIN Summit is a strong testament to the country's growing influence in Web3. Indian startups are playing a crucial role in decentralized infrastructure, and we are excited to connect with fellow developers who are solving real-world problems using blockchain."

As one of the world's leading startup hubs, Bengaluru is fast becoming a focal point for Web3 development. With the arrival of major blockchain networks like Solana, the city is positioning itself as a global leader in decentralized technology and innovation.
