Tapmoon Locks Liquidity & Sets Price Floor with Smart Contract–Powered TAPS Token

Tapmoon is a decentralised platform powered by the TAPS Token,designed to offer smart contract–based stability and community-focused token distribution.Built on the Binance Smart Chain,trusted space for secure,fair,and transparent DeFi participation.

Pune, Maharashtra Mar 28, 2025 (Issuewire.com) - | Blockchain / DeFi / Cryptocurrency

Tapmoon, a next-generation decentralised project built on the Binance Smart Chain (BSC), is turning heads with its smart contract–driven TAPS Token. With only **10.5 million tokens in total supply**, Tapmoon is setting a new standard for fairness, transparency, and price sustainability in the crypto space.

What Makes Tapmoon Unique?

- **Price Floor Mechanism**: TAPS is designed so its price only moves upward.
- **LP Tokens Burned**: Liquidity is permanently locked—no rug pulls, no tricks.
- **Community Ownership**: Over time, tokens flow from creators to real contributors via liquidity and promotional rewards.

Unlike many short-term projects, Tapmoon is focused on organic, community-driven growth. With strong tokenomics and smart limitations on transfers, sales, and internal movements, the TAPS Token ecosystem is built for long-term stability.

"We're not here to pump and dump. We're here to build," said a Tapmoon core team member.

As the project gains momentum, quiet whispers are hinting at potential collaborations—including one with the rising Web3 name, **Pengu**.
