

The Indianapolis Fire Department Launches Dynamoedge AI

Setting a New Standard in Public Safety and Mission-Critical Operations

Indianapolis, Indiana Mar 23, 2025 ([Issuewire.com](https://www.issuewire.com)) - The [Indianapolis Fire Department](#) (IFD), recognized as a global leader in public safety innovation @IFD_Chief Ernest V. Malone, proudly announces the launch of AUTONET, a real-time AI platform developed by [DynamoEdge](#). Designed to redefine fleet management, logistics, and proactive emergency operations, AUTONET transforms IFD's light fleet, fire trucks, and mission-critical apparatus into intelligent connected hubs. The platform seamlessly integrates the vehicle with its surrounding infrastructure, and it's able to provide dynamic route optimization, delivering an adaptive solution that can predict traffic patterns and adjust signals in real-time, while proactively communicating with IFD's vendors to ensure just-in-time delivery of critical parts and services—maximizing fleet uptime and operational readiness.

AUTONET empowers IFAD's operations:

Secure Data Management – IFD has real-time, full control of its operational data with unparalleled transparency while ensuring strict data privacy, security, and compliance.

Condition-Based Maintenance – AI-driven alerts notify technicians and garages about upcoming part replacements and service needs, ensuring maximum fleet uptime and reducing unexpected failures.

Fleet Optimization – The solution reduces technician downtime, keeping active and reserve fleets mission-ready for emergency response and tactical deployments.

Proactive Operations – IFD now leverages AI insights to enhance training, streamline resource allocation, and accelerate emergency response, operating with military-level precision and agility.

[Kevan Crawley](#), IFD Deputy Chief of Logistics stated: "DynamoEdge is a game-changer for IFD because it gives us the power to anticipate challenges, act faster, and ensure our teams are always ready to respond. This AI technology places IFD at the forefront of public safety innovation—giving us full operational visibility and the ability to enhance our efficiency in ways not possible before."

[Barbara B. Bessolo](#), CEO of DynamoEdge stated: "This launch marks a major leap towards data transparency and real AI-driven intelligence, where your data belongs to you. I'm proud to empower IFD and the City of Indianapolis with a new market standard where data ownership, privacy, and efficiency go hand in hand. This is the future of transportation and AI-infrastructure technology."

Municipalities, military organizations, and fleet operators looking to enhance efficiency, security, and cost-effectiveness are invited to explore AUTONET. This launch represents a paradigm shift: leveraging intelligent technology to drive proactive emergency response and strategic fleet operations to deliver unprecedented results.

Embrace the Future of Intelligent Operations with AUTONET AI.
