

World's First AR Book Cover Reveals Student Startup Secrets

The Highly Successful Student Startups and Their Stories Sparks Startup Passion Among Youth in a Robotic Age

Kollam, Kerala Mar 3, 2025 ([Issuewire.com](https://www.issuewire.com)) - *The Highly Successful Student Startups and Their Stories* launches with the world's first Augmented Reality (AR) book cover, featuring AI-powered interviews with students who turned college ideas into global companies. Available now, it proves many top businesses from the last 30 years started on campus—igniting hope as robots and AI reshape jobs.

This book contains stories of up to 50 student startups that originated on campus. It shares how these young founders teamed up with friends, found investors, and grew their ideas—without any experience. The book offers their struggles, solutions, and tips, making it a perfect guide for students, parents, and teachers to fuel new entrepreneurs in a robotic age.

Published by "One Library Per Village," it skips dull theories for real, hands-on lessons. It shows how campus dreamers built billion-dollar firms by staying creative and pushing past failures. With jobs changing fast, it highlights why innovation and intrapreneurship—skills companies love—help students shine, whether they launch a business or excel at work.

Grab it free on Amazon Kindle Unlimited or Google Books, or visit www.talkingbook.in. The book highlights campuses as the best startup launchpads, urging young students to think like innovators, turn projects into profitable ventures, and change the world. Schools, teachers, and parents should foster this creativity and celebrate successful founders to spark the next big idea.
