

Advancing Excellence in Neurosurgery Peter Nakaji, MD, FACS, FCNS, FAANS: Working to Redefine Expert Neurosurgical Care in Scottsdale

World-Class Neurosurgery. Personalized Patient Experience.

New York City, New York Jul 7, 2025 ([Issuewire.com](https://www.issuewire.com)) - Dr. Peter Nakaji, a globally recognized figure in neurosurgery, has opened a new neurosurgery private practice based at the Bob Bové Neuroscience Institute in Scottsdale, Arizona. Respected for his expertise in complex brain surgery, Dr. Nakaji brings more than 20 years of experience, academic leadership, and surgical innovation to

patients from across Arizona—and increasingly, from across the country.

He says that the new practice is designed for patients who want the highest level of neurosurgical care, but in a setting that is personal, efficient, and responsive. “I have always prioritized the highest level of surgical quality and expertise. This new practice we built from the ground up to focus on the experience of care,” says Dr. Nakaji. “People are frustrated with healthcare nowadays, especially when it is something as critical as neurosurgery. We offer access to the leading expertise, without the barriers that are all too common today.”

Concierge-Level Care—Without Concierge Fees

Patients have already traveled from more than 10 states and multiple countries for care at the practice. The reason is simple: exceptional expertise, delivered with personal attention.

Appointments are timely. Communication is clear. Surgery and recovery are carefully coordinated with the patient in mind. While many practices are becoming more corporate and impersonal, Dr. Nakaji’s response has been to do exactly the opposite: provide care that is focused, human, and grounded in experience.

Innovation, Education, and Academic Excellence

Dr. Nakaji has spent his career at the intersection of patient care, innovation, and education. Most recently Chair of Neurosurgery at the University of Arizona College of Medicine–Phoenix, he continues to be closely involved in academic medicine and recently accepted a professorship at the new Arizona State University School of Medicine and Advanced Medical Engineering (ASU SOMME). “ASU’s new school is focused on innovation,” he notes. “It’s exciting to be part of something whose whole purpose is to carry us into the future of medicine.”

Innovation is more than an idea to Dr. Nakaji. As one of the inventors of GammaTile® Therapy—an FDA-approved brain tumor treatment now widely used across the U.S.—Dr. Nakaji has a deep commitment to research and clinical advancement. He is also a widely published author, having written or edited 12 major neurosurgical textbooks. “Writing a book has become more of a habit,” he says. “It’s how I crystallize ideas—and how I give something back to the field.”

Areas of Expertise

Dr. Nakaji’s clinical focus includes:

- Brain tumors (including gliomas, meningiomas, and metastatic disease)
- Aneurysms and cerebrovascular disease
- Minimally invasive and endoscopic brain surgery
- Skull base and complex cranial procedures
- Chiari malformation
- Hemifacial spasm and trigeminal neuralgia
- Colloid cysts

Dr. Nakaji is most often able to bring a minimally invasive (keyhole) or endoscopic approach to his patients’ care, which results in smaller incisions, faster recovery, and better cosmetic outcomes. “I got known for incisions that are hard to find and for not cutting off people’s hair, but really keyhole surgery is much more than that. It is about being gentle and effective with people’s most precious possession,

their brain.”

Throughout his career, Dr. Nakaji has been recognized not only for technical excellence but also for the time and care he gives each patient. “Neurosurgery is never routine to the patient,” he says. “The goal is not just to do an operation well – it is to listen to the patient and make sure it is the right operation for that individual person, someone who feels heard, informed, and well cared for.”
