

AIRX Launches XONE AI-Enabled, platform to Source, Manage and Deliver Network Services Globally

liverpool, UK May 10, 2025 ([Issuewire.com](https://www.issuewire.com)) - [AIRX Technologies](https://www.airxtechnologies.com), a UK-headquartered global network integrator operating in over 200 countries, today announced the launch of XONE— an AI-powered, cloud-based NaaS (Network-as-a-Service) platform designed to transform how service providers source, manage, and scale global network connectivity, infrastructure, and managed services. Built with automation, real-time intelligence, and API-first architecture at its core, XONE empowers providers to make faster, smarter decisions across every layer of their network ecosystem. At its core, AIRX believes that global network infrastructure should be transparent, simple, and accessible. That same philosophy powers XONE, a platform engineered to streamline everything from sourcing internet connectivity and capacity service to deploying hardware, managed CPE, and on-site field services.

"XONE was born from a simple idea—one platform for all," said Piyush Srivastava, CEO of AIRX Technologies. Over the past 12 months, we've invested heavily in building a platform that simplifies how global networks are sourced, managed and delivered. With XONE, we're laying the foundation for a smarter, more agile telecom ecosystem. This marks our evolution from a traditional aggregator telco into a vertically integrated technology-driven organization - powered by AI, data, and automation."

Built for Speed. Designed for Insight. Powered by Data.

XONE gives service providers real-time access to AIRX's global data lake—making it easy to source internet, point-to-point, and data center connectivity services, alongside networking equipment, colocation, and field support. But the real power lies in the platform's unique service availability and pricing engine, backed by hundreds of top-tier ISPs and Carriers.

XONE goes far beyond just quoting prices—it delivers actionable insight. From identifying on-net and near-net providers to surfacing lead times, SLAs, and deployment options, XONE ensures decisions are faster, smarter, and built for scale.

Strategic Backing from Neeco s.r.o.

The launch of XONE is further strengthened by the backing of Neeco s.r.o., a long-time strategic partner and investor in AIRX. As a global ICT services leader, Neeco brings decades of experience and an expansive reach across emerging and developed markets, bolstering AIRX's ability to deliver high-

performance infrastructure solutions, even in the world's most challenging environments.

“Having Neeco’s continued support allows us to execute our bold global strategy faster, with deeper reach and reliability,” added Piyush.

“XONE is redefining what it means to deliver automated and digitized customer experiences in managed infrastructure services,” said David Patek, CEO of Neeco Sro. “With the power of digital environments and AI, we see immense potential to enhance operational efficiency in this data-rich, diverse, and dynamic industry. Backed by Neeco, AIRX Technologies is committed to driving innovation at the intersection of management, cloud applications, and AI, with XONE leading the way.”

Key Capabilities of XONE:

- One Platform, All Services: Internet, Point to Point connectivity, Data Center Connectivity, Colocation, Networking Equipment, and Field services in 200+ countries.
- Intelligent Infrastructure Insights: Powered by AWS and Google Maps, XONE gives users real-time visibility into network availability, provider options, pricing, lead times, and SLAs.
- API-Driven Integration: Securely connects to customer systems to automate procurement and operations.
- Truly Global. Deeply Local: Built for 200+ markets, with 300+ suppliers today and 1,000+ planned by Q4 2025.
- Future-Focused: AI and Big Data analytics on the roadmap for predictive sourcing and real-time optimization.

Solving the Industry’s Biggest Pain Point

Until now, sourcing global network services has been fragmented, manual, and slow. XONE changes the game—offering service providers a single source of truth for digital infrastructure sourcing, with end-to-end visibility and orchestration.

From high-capacity fiber routes in major metros to last-mile connections in challenging locations, XONE provides a global view with local precision—all at your fingertips.

The AIRX Vision

AIRX is building the world's most intelligent, connected, and transparent digital infrastructure ecosystem—empowering service providers to move faster, operate smarter, and deliver better. XONE represents a fundamental shift from legacy telco procurement models to a fully digital, insight-led experience.

About AIRX Technologies AIRX Technologies is a global network integrator specializing in network connectivity, data centers, hardware, and professional services for service providers worldwide. With operations spanning 200+ countries, AIRX is redefining the future of telecom by combining traditional expertise with a bold, tech-first vision.
