

Creatiosoft Delivers High-Performance Card Game Platforms for iGaming Business

Boost your iGaming business with our high-performance card game platforms from Creatiosoft. Our expert solutions ensure seamless gameplay and help drive higher player engagement.

Mountain View, California May 1, 2025 ([IssueWire.com](https://www.IssueWire.com)) - Creatiosoft, a leading card game development company with over 10 years of experience, just released innovative card game solutions for online iGaming businesses.

These robust, scalable platforms enable businesses to launch card-based games quickly without sacrificing performance or security.

This launch comes at a time when online card games are becoming more popular, giving iGaming businesses both big chances and tough competition.

"The iGaming landscape grows more competitive daily. Our card game development services give companies exactly what they need – reliable, safe platforms that can be customized quickly. This lets businesses focus on getting players instead of solving technical problems," said Rishabh Agrawal, CEO of Creatiosoft.

Market Challenges Addressed

Online gaming companies usually face big hurdles when launching card games. Making these games often takes more than 9 months and requires hiring expensive programming experts. Following different rules in different countries makes things even harder.

Many businesses struggle with the technical components of creating truly fair and secure card games, especially when creating shuffle systems that work correctly. These problems often cause delayed launches, spending too much money, and games that disappoint players.

The Creatiosoft Solution

As a trusted partner in the iGaming industry, Creatiosoft has created platforms that directly solve these problems. The company's solutions reduce development time by up to 30%, allowing businesses to launch within months rather than years.

The platforms handle key technical needs, including random number creation, data management, payment processing, and meeting legal requirements.

Key Platform Features

Creatiosoft's card game platforms include an extensive feature set:

- Multi-table tournament capabilities with flexible structures
- Cash game support with configurable stake levels
- Comprehensive dealer dashboards for live dealer implementations
- Advanced player verification and fraud detection systems
- Integrated payment processing with multiple gateway options
- Real-time analytics and reporting dashboards
- Robust backend management tools for promotions and bonuses
- Cross-platform compatibility

The solution incorporates HTML5 technology and works well on websites and mobile apps. All platforms are designed to look good on any screen size.

Tangible Business Benefits

Operators implementing Creatiosoft's solutions typically experience substantial advantages beyond accelerated time-to-market. This solution saves money compared to building games in-house, often

cutting total costs by 20-30%.

The technology used by Creatiosoft is strong and reliable. The company also offers ongoing support, including regular security updates, faster performance, and new features — all without needing extra development costs. This helps clients stay ahead in the market.
