

Imagen Network Delivers Personalized Social Logic With AI Feed Adjustments

Transforming decentralized social experiences with intelligent, user-driven content curation.

Singapore, Singapore Apr 20, 2025 ([Issuewire.com](https://www.issuewire.com)) - [Imagen Network](#) (IMAGE) is introducing advanced AI feed adjustments to its decentralized social platform, enhancing how content is delivered and personalized across Web3 communities. This new feature leverages machine learning to create more tailored and relevant user experiences while preserving the autonomy and transparency that decentralized platforms promise.

By integrating AI-driven content organization, users will now experience a more personalized and seamless social feed. The system adjusts the feed based on user interactions, preferences, and social behavior, ensuring that each individual's content stream is as relevant and engaging as possible. Whether it's posts, discussions, or community updates, the AI engine works in real time to highlight what matters most to the user.

This update also empowers community moderators, enabling them to fine-tune feed parameters for group-based interactions. The AI feed logic ensures that users in multichain environments, such as Ethereum, Solana, or BNB Chain, will experience consistent and relevant content delivery across different networks.

Imagen Network continues its mission of empowering decentralized communities by improving social logic and engagement while staying true to its core values of privacy, personalization, and user control.

About Imagen Network

Imagen Network is the world's first decentralized social networking platform powered by AI and blockchain. Focused on privacy, personalization, and user ownership, Imagen Network is redefining social engagement in Web3.
