

Jugapro India- Adibis Secure add more Kinetic interceptors to WALAT3M- cUAS suite

To counter the growing incidence of hostile drone threats, with additional interceptors, the comprehensive Anti Drone Solution gets more HardKill options.

Bengaluru, Karnataka Feb 4, 2026 ([Issuewire.com](https://www.issuewire.com)) - WALAT3M Integrates Advanced Kinetic Kill Platforms

Jugapro India Private Limited and its wholly owned subsidiary [Adibis Secure](https://www.adibissecure.com), today announced that their flagship product #WALAT3M is poised for seamless integration of three kinetic defense systems into the OEM-agnostic WALAT3M C-UAS framework.

[Jugapro](https://www.jugapro.com), which is one of the first few R&D units to be certified under DGCA UAS Rule 57 in mid-2019, pioneered Anti UAV research or the #cUAS development long before the September 14, 2019 Abqaiq-Khuras drone attacks. Adibis Secure brings proven radar-centric, AI-fused soft + Hardkill sensor fusion validated in over 25 field trials with 88 percent neutralization efficacy. WALAT3M's OEM agnostic open-architecture backbone now hosts three high-impact kinetic effectors:

Swarm Buster – Fully autonomous kamikaze drones designed for coordinated swarm interdiction.

Sky Gazer- A tethered ISR platform offering uninterrupted high-altitude surveillance and comm telons.

[DroneHunter F700](https://www.dronehunter.com) – Fortem Technologies' BVLOS net-capture interceptor, featuring TrueView™ radar and AI analytics for safe, collateral-minimized neutralization of almost all kinds of rogue UAVs.

The WALAT3M Platform Highlights

Rapid Deployment: Sub-60-minute integration for fixed, mobile, and airborne configurations.

Multi-Sensor Fusion: Combines RF, EO, thermal and acoustic detection with Kaastu AI trajectory forecasting for sub-second threat prediction.

Versatile Kill Options: Supports both soft-kill (RF/GPS jammers, spoofers and cyber takeover) and hard-kill (laser, projectile, kamikaze drone) modules.

Scalable Command & Control: Unified management across single sites and networked defense grids via Swayat ISR grid.

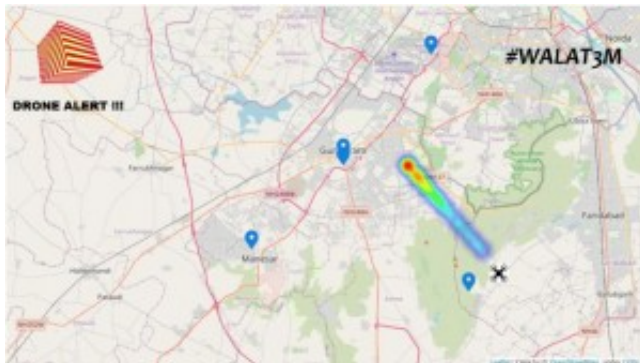

“By integrating multi spectral sensor suite with Swarm Buster and Fortem’s DroneHunter, WALAT3M now emerging to be a truly end-to-end counter-drone solution,” said Pawan Kakkar, CEO & Director of Jugapro India Private Limited. Maj Gen MPS Baveja said the OEM and Tech agnostic design removes vendor lock-in, empowering defense forces to field new capabilities without delay.

Availability & Next Steps

Pilot deployments with select defense clients in Q3 2025.

Global export readiness under the Atmanirbhar Bharat initiative.
