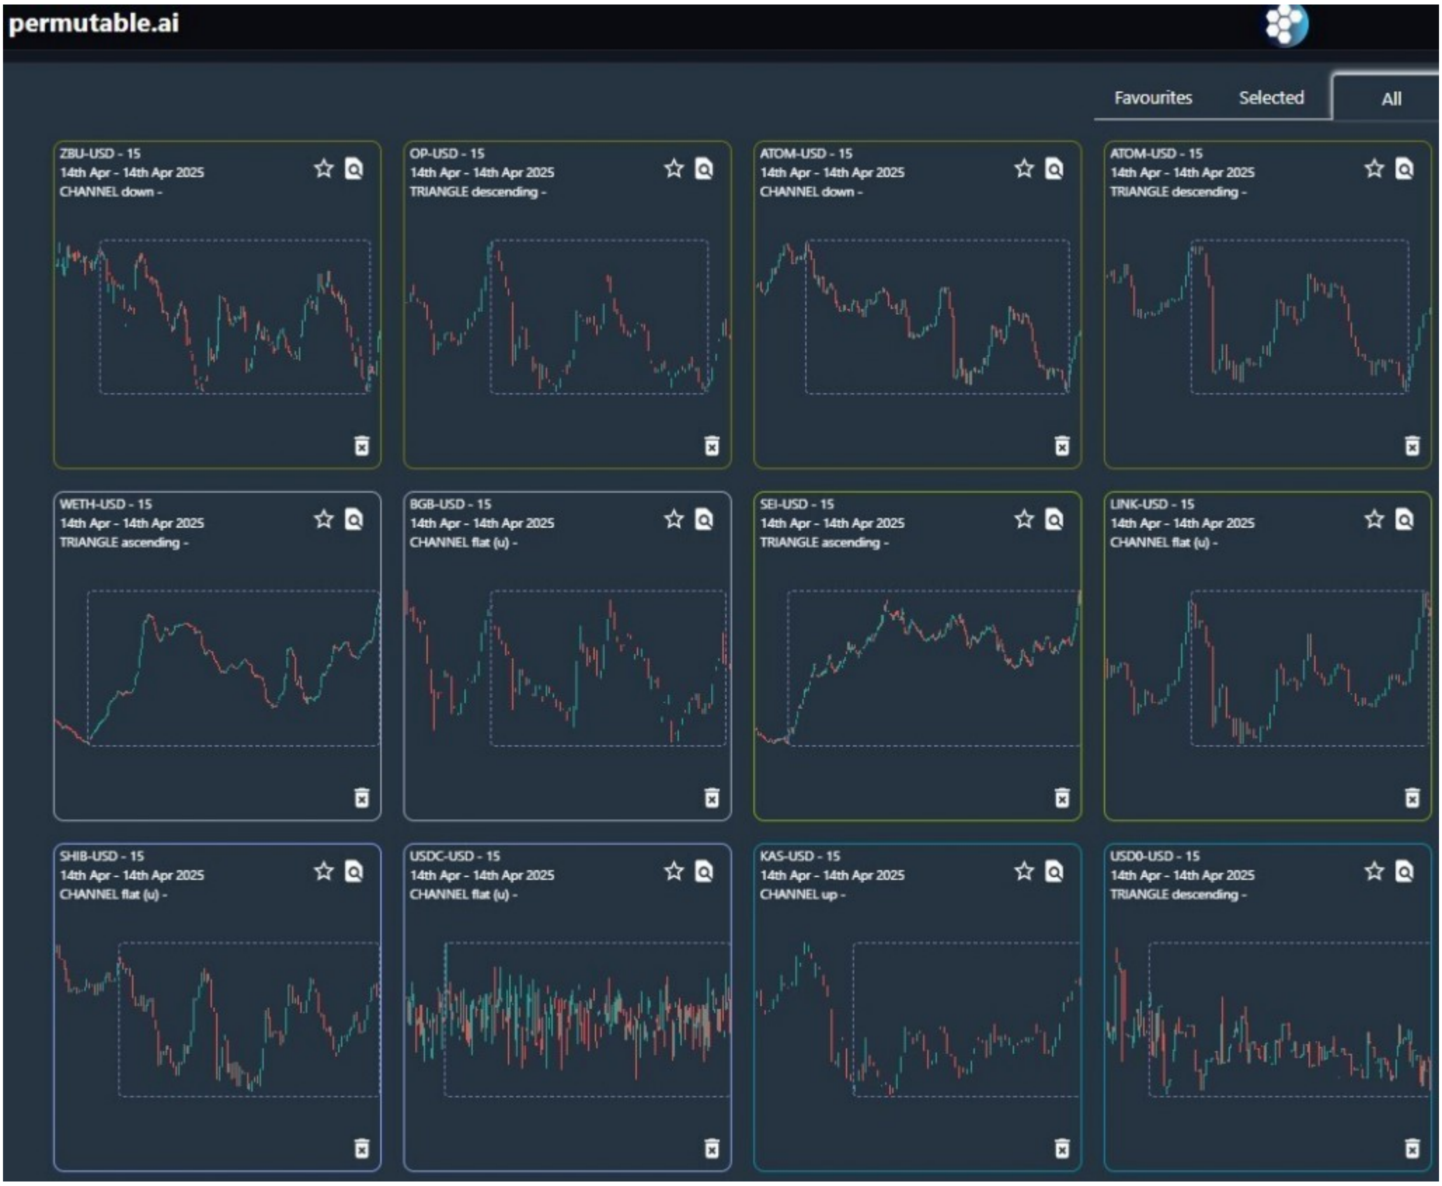
Permutable launches free AI-driven pattern-spotting tool for crypto traders across 93+ digital assets

New free tool lets crypto traders detect profitable patterns in seconds



London, United Kingdom Apr 29, 2025 (Issuewire.com) - Permutable AI today announced it's giving away its powerful R2 Pattern Detection tool to all cryptocurrency traders for free. This technology helps traders spot profitable trading patterns faster and more accurately than traditional charting tools across a comprehensive range of digital assets.

Unlike other trading tools that need lots of examples to work, Permutable's R2 system can learn to recognise trading patterns from just a single example. This means traders can quickly teach the system to find patterns they've profited from in the past.

"Our technology can spot complex patterns with just one example, helping crypto traders see opportunities others might miss," said Wilson Chan, Permutable AI Founder and CEO.

The R2 system runs in any web browser and doesn't require powerful computers. It scans thousands of cryptocurrency pairs at once and shows results on a colour-coded map that highlights the best opportunities.

R2 will offer seamless access to 93 USD-quoted crypto assets, spanning every major market segment, so traders can analyse everything from blue-chip stalwarts like Bitcoin, Ethereum, BNB, Solana, Cardano, and Litecoin to high-growth layer-1 networks such as Polkadot, Avalanche, Near, Sui, and Internet Computer.

The platform also delivers pattern recognition for all leading stablecoins - USDT, USDC, DAI, USDS, Ethena USDe - and their liquid-staking or yield-bearing variants, alongside wrapped and tokenized derivatives like WBTC, WETH, Wrapped TRON, and Wrapped Fantom for cross-chain flexibility.

Beyond the fundamentals, R2 covers DeFi governance tokens (AAVE, UNI, MKR, LINK, GRT), exchange-native tokens (OKB, KCS, BGB, GT), and the latest memecoins and niche altcoins - Dogecoin, Shiba Inu, Pepe, Bonk, Quant, Zeebu, and more - catering to every trader's appetite.

Whether users are seeking capital preservation with stablecoins, staking rewards through stETH, Rocket Pool ETH, and Jito Staked SOL, or speculative upside on emerging layer-2 and community tokens, Permutable's full-spectrum lineup positions traders with *One Platform, 90+ Assets.*

Traders can use R2 in two ways:

- **Pick and save**: Select a pattern directly from a chart that worked well in the past, and the system will find similar patterns across all cryptocurrencies.
- **Draw your own**: Sketch the pattern you're looking for, and the system will find matches based on your drawing.

"Whether you follow textbook patterns or have your own trading signals, our tool works the way you do," explained Chan.

Permutable has decided to offer this powerful technology at no cost to cryptocurrency traders.

"Crypto markets are perfect for our technology because of their fast-moving nature," said Talya Stone, CMO. "By offering R2 free to crypto traders, we're helping individual traders compete with the big players while also improving our system for everyone."

The tool allows traders to save their favourite patterns and scan all cryptocurrencies simultaneously, organising results by timeframe and showing which opportunities look strongest. What used to take hours of chart-watching can now be done in seconds.

Available now

Permutable's R2 Pattern Detection system is available starting today for all cryptocurrency traders at crypto.permutable.ai. Keep up to date with Permutable's latest news and insights on their website.
