

Server5.click Launches 100% Free Web Hosting Service Powered by Open Source Technology

In a bold move to make digital freedom and opportunity accessible to everyone, Server5.click is proud to announce the official launch of its new project: 100% Free Web Hosting for everyone by Server5.click

Grad Zagreb, Croatia (Hrvatska) Jul 22, 2025 ([Issuewire.com](https://www.issuewire.com)) - Few months ago we started this initiative, built entirely on **trusted open-source technologies**, which marks a significant milestone in the web hosting industry, traditionally dominated by costly services and restrictive terms. **Free Hosting by Server5** is offering individuals, entrepreneurs, developers, students, and nonprofits an opportunity to build and grow their online presence—without financial barriers, intrusive ads, or hidden catches.

Our free hosting is a completely free web hosting platform, now available to users around the world at <https://free-hosting.server5.click/>.

A Vision Rooted in Freedom and Accessibility

The journey of **Server5.click** began with a simple yet powerful idea: **the internet should be open, affordable, and available to everyone**. To bring this vision to life, the team chose to build their platform on stable and proven open-source technologies such as **Linux, Apache, PHP, and MySQL**—the very foundations that power much of today's internet.

"We believe in the principles of openness, collaboration, and community that define the open-source movement," said Ivan Bolfek, founder of Server5.click. *"By relying on open-source tools and giving*

back to the global digital community, we're not just providing free hosting—we're supporting a healthier, more inclusive internet."

From Beta to Full Launch: A Story of Careful Growth

Free Hosting by Server5 was launched quietly in **beta testing on January 1, 2025**. Over the course of several months, early users from various backgrounds tested the service, providing invaluable feedback that helped fine-tune the platform's performance, reliability, and user experience.

Throughout the beta phase, Server5.click focused heavily on:

- **Ensuring server stability and uptime**
- **Enhancing security protocols**
- **Optimizing for speed and accessibility**
- **Streamlining the setup process for new users**

Today, after months of rigorous development and real-world testing, Server5.click is proud to officially move out of beta and open the doors to **everyone who wants or needs a place to build their online presence for free**.

Key Features of Free Hosting by Server5:

- **100% Free Web Hosting**—No subscriptions, no hidden fees, and no forced ads.
- **Open Source Foundation**—Built on the reliable LAMP stack (Linux, Apache, MySQL, PHP).
- **Full CMS Support**—Easily install WordPress, Joomla, Drupal, and other open-source content management systems.
- **User-Friendly Interface**—Launch your website in just a few clicks with an intuitive dashboard.
- **Secure and Fast Infrastructure**—High uptime reliability, HTTPS support, and ongoing improvements.
- **True Freedom**—Users retain full creative and administrative control over their sites.

Supporting the Open Web

At a time when many tech giants are centralizing control over online spaces, Server5.click stands firmly with the open web movement. By offering a **free, open, and neutral platform** for website creation, the project hopes to foster a new generation of digital creativity, entrepreneurship, and activism—particularly in underserved and economically disadvantaged communities.

"Too often, the cost of hosting is a barrier to great ideas reaching the world," Bolfek added. "We are here to break down that barrier. Our platform is about giving everyone—regardless of budget—a

chance to be heard, seen, and connected."

Looking Ahead

Server5.click is committed to continuously improving its services while staying true to its principles. Future plans include offering optional premium upgrades for those who need more resources, but the core free hosting service will **remain permanently free** for all users.

Through strong community involvement, responsible stewardship of open-source tools, and a focus on real user needs, **Free Hosting by Server5** aims to grow into one of the most trusted names in accessible web hosting.
