

Asquare Parts Inc. Launches Heavy-Duty U-Bolt Fasteners for Industrial and Structural Applications

Wilmington, North Carolina May 16, 2025 ([Issuewire.com](https://www.issuewire.com)) - Asquare Parts Inc., a leading manufacturer of high-performance industrial components, has announced the launch of its latest product line: heavy-duty [U-bolt fasteners](#) tailored for a wide range of industrial and structural applications. Designed for secure pipe and tube anchoring, support systems, and mechanical assemblies, these U-bolts are built to withstand extreme environmental conditions and heavy loads.

The newly launched U-bolts are available in a variety of sizes and thread configurations, made from high-grade stainless steel, carbon steel, and galvanized finishes. Each unit is engineered for dimensional accuracy and consistent clamping force, ensuring reliable performance in critical load-bearing environments such as construction sites, marine projects, oil & gas plants, and transportation infrastructure.

“As a trusted supplier in the industrial fasteners sector, Asquare Parts Inc. is proud to expand its product portfolio with a fastening solution that meets both standard and custom requirements,” said a company spokesperson. “Our U-bolt fasteners are tested for durability, corrosion resistance, and load capacity, making them an essential component for engineers and builders.”

Asquare Parts Inc. continues to invest in research and advanced manufacturing processes to provide fasteners that meet international quality standards. In addition to standard sizes, the company also offers **custom U-bolt designs** to match specific application needs.
