

Barrier-Free Stablecoins: Aryze & Concordium Power Enterprise-Grade Issuance

On-demand, compliant token issuance on Concordium's identity-first blockchain.

Strategic Partnership

Copenhagen, Denmark May 21, 2025 ([Issuewire.com](https://www.issuewire.com)) - Aryze, the Copenhagen-based fintech innovator behind Stablecoin-as-a-Service, today announces a strategic partnership with Concordium, the identity-first layer-1 blockchain built for regulatory compliance and high throughput. By combining Aryze's issuance service with Concordium's Protocol-Level Tokens (PLT), organizations can now launch fully backed stablecoins faster and more securely than ever.

Aryze's Stablecoin-as-a-Service has powered nine enterprise deployments, providing fully backed, transparently audited, compliance-first token issuance with unmatched speed and simplicity. Our service-centric approach delivers fully backed, transparently audited token issuance processes that ensure compliance and scalability — enabling secure cross-border payments, robust asset tokenization, and transparent transaction management.

Organizations unlock powerful capabilities: secure cross-border payments, compliant asset tokenization, and real-time transaction transparency.

“Stablecoins are only as useful as the reserves behind them. By uniting Aryze's fully-collateralised issuance with Concordium's identity-layered protocol, compliance and auditability come built-in. In minutes, institutions can mint audit-ready digital dollars, pounds or gold and perform instant FX on-chain via our ReForge rail—no external liquidity pools needed. Together, Aryze and Concordium are elevating stablecoins to core financial infrastructure.” [Jodi Usama Husain](#), CTO of Aryze

“With Protocol-Level Tokens, Concordium eliminates the complexities and vulnerabilities of smart contracts for stablecoin issuance, adding more security to the ZKP-powered identity layer already hardcoded into the protocol. Combining this with Aryze's fully collateralized stablecoins sets a new standard for enterprise-grade token issuance and demonstrates how regulated finance can move at the speed of innovation, without compromising trust.” [Peter Marirosans](#), CTO of Concordium

To deliver on this vision, the integration advances in two strategic phases:

- **Native Issuance on Concordium:** Aryze's service integrates with Concordium's PLT framework, enabling organizations to spin up compliance-ready stablecoins with minimal overhead, and Aryze's own stablecoins (eUSD, eGBP, and eGOLD) will be added to the Concordium network.
- **Cross-Chain Expansion:** Cross-chain bridges launch next, allowing these tokens to move seamlessly across multiple blockchains—maximizing interoperability and reach.

Through Concordium's PayFi (Payment Finance) ecosystem, this alliance equips governments, financial institutions, and fintech innovators with a turnkey solution: from tokenizing fiat and precious metals to automating complex treasury operations—underpinned by end-to-end transparency and regulatory alignment.

Join the Conversation

Our CEO, **Jack Nikogosian**, will join **Mike Milner**, Chief Commercial Officer (CCO) at Concordium, in a live X Space on **May 21 at 15:00 UTC**. They'll discuss the backbone of programmable payments, explore how Aryze leverages Concordium's regulatory edge, and unveil why PayFi is the smarter way to move money.

About Aryze

Aryze is your one-stop solution for Branded Stablecoins, FX and Cross-Border Payments, Treasury Management, and Tokenization. Our core Stablecoin-as-a-Service offering empowers organizations to deploy fully backed, programmable digital currencies in days, not years. Having facilitated nine

enterprise deployments and issuing flagship coins like **eUSD**, **eGBP**, and **eGOLD**, Aryze combines compliance-first issuance with blockchain innovation, delivering seamless, transparent financial tooling. aryze.io

About Concordium

Concordium is a scalable Layer 1 blockchain that offers a unique identity layer at protocol level to ensure verified and private user interactions, enabled via zero-knowledge proof technology. Founded in 2018, the research-backed chain enables Smart Money with programmable protocol-level tokens, advanced PayFi features like time releases and compliance controls, and secure ID-based geofencing for cross-border transactions, making it the chain of choice for enterprise-ready stablecoins looking for real-world adoption while adhering to new regulatory frameworks. concordium.com
