

East Orange-Based Brand Launches Herbal Toothache Remedy That Works in 10 Minutes or Less!

New oil pulling remedy targets tooth pain, swelling, and bacteria using herbs like black walnut, clove, and oil of oregano — all in a solid melt-in-mouth formula with no chemicals or numbing agents.

East Orange, New Jersey May 15, 2025 ([Issuewire.com](https://www.issuewire.com)) - *Maverick Homemade Goods*, a woman-owned herbal wellness brand, proudly introduces **Tooth of the Lion** — a potent, solid-form oil pulling remedy designed to alleviate toothaches, stop bleeding gums, reduce dental abscesses, and support overall oral health using time-honored botanical ingredients.

Crafted from necessity, *Tooth of the Lion* was developed when founder Nidja Fisher experienced severe dental pain without immediate access to care. Utilizing available herbs such as cloves, oil of oregano, turmeric, and black walnut hull, she created a remedy that provided overnight relief. This personal experience inspired a product now assisting others in managing tooth pain, oral infections, and inflammation naturally and effectively.

“This remedy was born from survival. I was in pain, had no access to help, and refused to suffer in

silence. I turned to the herbs I trusted, and they worked — fast. *Tooth of the Lion* is my answer to helplessness. It's for anyone who's ever needed relief and had to figure it out on their own," says Fisher. "Now, no one has to."

Unlike traditional oil pulling methods that require messy liquids and extended swishing, *Tooth of the Lion* offers a **solid melt-in-mouth formula** that is portable, mess-free, and highly concentrated. Users report pain relief in **10 minutes or less**, along with reduced swelling, fresher breath, and improved gum health overnight.

Key Herbal Ingredients and Their Oral Health Benefits:

- **Black Walnut Hull:** Contains juglone, a compound with antibacterial properties that may help maintain a healthy oral environment by supporting gum health and reducing plaque buildup.
- **Wormwood (*Artemisia absinthium*):** Exhibits antibacterial activity against various oral pathogens, suggesting its potential in preventing plaque formation and dental caries.
- **Goldenseal (*Hydrastis canadensis*):** Traditionally used as an herbal antibiotic, goldenseal contains berberine, which has demonstrated antimicrobial activity against oral pathogens.
- **Clove (*Syzygium aromaticum*):** Rich in eugenol, clove oil acts as a natural anesthetic and antibacterial agent, providing effective relief from toothache and inhibiting bacterial growth in the mouth.
- **Oil of Oregano (*Origanum vulgare*):** Known for its antibacterial, antifungal, and anti-inflammatory properties, oregano oil has shown effectiveness against oral pathogens and may help in preventing dental caries.

Tooth of the Lion is handcrafted in small batches and is now available for purchase at www.maverickhomemadegoods.com.
