

Memes say, "Your AI are belong to us"

Meme generating AI allows any picture to become a meme

Las Vegas, Nevada May 20, 2025 ([Issuewire.com](https://www.issuewire.com)) - You thought memes were just for memesmiths and bored interns? Nah, [Meme Me](#) revealed the *4D-reverse Uno card* on meme culture. [Barky AI](#) did the unthinkable, handed the internet the keys, and said, "Here—break the simulation."

The Meme is the Medium

Meme Me is designed to look like the classic meme. It is supposed to look cluttered. Yes, the website is supposed to look that way. Barky AI took time to review meme culture and developed a meme generator which felt like a meme.

Your Photos. Your Meme.

Your dog. Your blurry club photo from 2011. A picture of you know who or that other person. Meme Me turns it into an authentic meme worthy of likes, upvotes, or legacy status. No templates. Just positive energy.

"I am not really sure what to say here. Do I just say anything?" Chris Barkhurst said when speaking about initial success about Meme Me.

Chris Barkhurst continues, "Where is the setting for this thing? I need to get my glasses. It is too small. SARA!!! Help. The phone. I can't see the button. It is recording for the interview and I can't stop the recording thing."

Why Meme Me is the new meme frontier

Upload any photo to Meme Me. Use the optional Meme Me custom prompt feature to use your inside jokes, trendy topics, or buzz worthy roasts. Yes, that was corny but you should see the stuff that was suggested by Emily and Chad. Their stuff was worse than that.

After clicking submit, your new meme is generated. Based on the ancient meme lore, you can choose old school meme font or the new meme font. Since Barky AI cares about meme culture, you can add borders, change where the text is positioned on the meme. We think you can change the colors. We would check but it is Friday at 4:52pm and we got a weekend packed and this is the last thing we got to do before we go home. So check it out yourself. The link is above. We know that works.

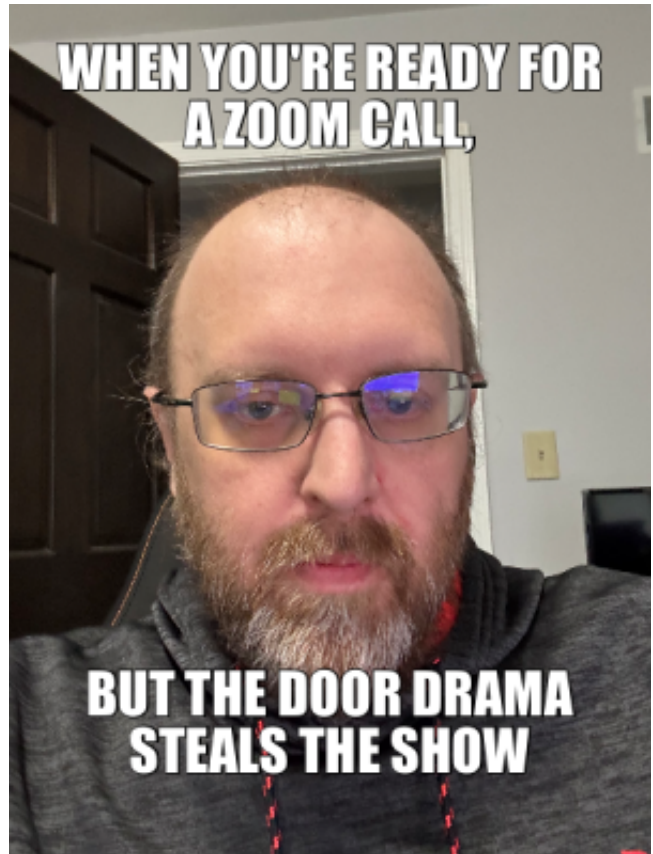

Users of the site will often wonder what will happen with the pictures they upload. Meme Me does not keep a copy or store any of the photos the user uploads. Meme Me does not store or keep any of the memes users create. However, a spokesperson from Meme Me states, "Meme Me uses third party tools which assist in the transfer of images. Those third party tools may store images for a period of time. This is stated in our terms of use. We want full transparency for our public launch."

Barky AI founder, [Chris Barkhurst](#), says, "They made me into a meme!!! When did they do that?"

[Barky AI](#) offers a suite of demos beyond Meme me—everything from book recommendations to an unofficial movie tie in—so you can keep the fun rolling across every channel.

About Embarqi

[Embarqi](#) is an embedded growth unit which partners with organizations who recognize the value is a success. Embarqi has partnered with organizations around the world to bring clarity to decision makers, teams, and leaders. Embarqi has helped organizations achieve goals once thought impossible to meet.
